

Chapter 1: Introduction – The Science of Biology

1. Discuss in your group how the scientific method works, and the difference between inductive and deductive reasoning. Come up with examples of inductive and deductive reasoning. Do NOT worry about learning the scientific method as “step one – step two – etc.”
2. Discuss testable models, including terms for them and why “testable” matters. How does this relate to the supernatural?
3. Explain the characteristics of living matter to each other. Answer the “Fido” question (will be given in class).
4. Discuss the role of information in life, and how it is dealt with (on the molecular level).
5. Explain to each other the binomial system and taxonomic hierarchy. What is a species name? What do the two words in a species name represent, and how do you write them? How will you memorize the hierarchy?
6. What are the three domains and six kingdoms? How do you decide which kingdom to put a eukaryote into?
7. What is the importance of energy in living systems? What are autotrophs and heterotrophs?

I. Biology is Studied Using the Scientific Method

A. Science is based on a systematic thought process.

1. **Deductive reasoning** - Summarize the information at hand and draw conclusions from that information; proceeds from the general to the specific.
2. **Inductive reasoning** - Drawing a generalization from several specific observations; proceeds from the specific to the general. Must be careful, because it is **impossible to prove** the accuracy of the generalization.

B. Observations, testable models, and experiments

1. The scientific method is a recursive process for discovering knowledge that involves making observations, making testable models, and conducting experiments.
2. First step involves collecting information and/or **summarizing existing observations** about the phenomenon under study.
