Hydraulic structures occupied a vital role in the development of civilization from the earliest recorded history up to the present and undoubtedly will do so in the future. Humanity in ancient times settled mostly near perennial rivers, nomadic people frequented oases and springs and to augment these natural ephemeral supplies established societies built primitive dams and dug wells. This 4 volume set contains several chapters each of size 5000-30000 words with perspectives, applications and extensive illustrations. It carries state of the art knowledge in the fields of Hydraulic Structure Equipment and Water Data Acquisition Systems. In these volumes the historical origins, modern developments and future perspectives in the field of water supply engineering are discussed. Various types of hydraulic structures, their associated equipment and the various systems for collecting data are described. These four volumes are aimed at the following five major target audiences: University and College Students, Educators, Professional Practitioners, Research Personnel and Policy Analysts, Managers and Decision Makers, NGOs and GOs.

*Structural Integrity of Welded Structures* Alin Constantin Murariu, 2013-09-10 Selected peer reviewed papers from the 10th International Conference on Structural Integrity of Welded Structures ISCS 13 July 11-12 2013 Timisoara Romania.

*Renewable Energy and Sustainability* Imran Khan, 2022-06-22 Renewable Electricity and Sustainability Prospects in Developing Economies is the first book of its kind to be dedicated entirely to the needs of emerging economies. It provides readers with a comprehensive review of current renewable energy technologies, their status in emerging economies and the potential for sustainable renewable electricity generation in those countries. A multidisciplinary approach is used to assess the needs and challenges of each region which is supported by quantitative analyses of the current and future potential for renewable electricity generation. Real world examples are also provided from the respective electricity sectors of each region. This resource is a unique reference for graduates and researchers on the social, technical and economic landscape of renewable energy in emerging economies and would also be useful to NGOs and policymakers in developing countries or those working in sustainable development. Focuses specifically on the renewable energy and sustainability needs of developing economies. Explores the renewable energy potential of developing countries and how this can be converted to sustainable electricity generation supported by quantitative analyses and real world case studies. Addresses energy efficiency, energy management and the socioeconomic aspects of renewable electricity generation in developing countries in addition to each renewable energy resource.

*Intelligent Autonomous Systems* 6 Enrico Pagello, 2000

After a long period in which the research focused mainly on industrial robotics, nowadays scientists aim to build machines able to act autonomously in unstructured domains and to interface friendly with humans while performing intelligently their assigned tasks. Such intelligent autonomous systems are now being intensively developed and are ready to be applied to every field from social life to modern enterprises. We believe the following years will be increasingly characterised by their extensive use. This is dramatically changing the whole scenario of human society.
