### Mathematical Papers by William Kingdon Clifford William Kingdon Clifford,1882

Epistemology and Psychology of Functions J. Piaget, 1977 Years ago prompted by Grize Apostel and Papert we undertook the study of functions but until now we did not properly understand the relations between functions and operations and their increasing interactions at the level of constituted functions By contrast certain recent studies on constitutive functions or preoperatory functional schemes have convinced us of the existence of a sort of logic of functions springing from the schemes of actions which is prior to the logic of operations drawn from the general and reversible coordinations between actions This preoperatory logic accounts for the very general and until now unexplained primacy of order relations between 4 and 7 years of age which is natural since functions are ordered dependences and result from oriented applications And while this logic ends up in a positive manner in formalizable structures it has gaps or limitations Psychologically we are interested in understanding the systematic errors due to this primacy of order such as the undifferentiation of longer and farther or the non conservations caused by ordinal estimations of levels etc as opposed to extensive or metric evaluations In a sense which is psychologically very real this preoperatory logic of constitutive functions represents only the first half of operatory logic if this can be said and it is reversibility which allows the construction of the other half by completing the initial one way structures    *The Encyclopaedia Britannica* Hugh Chisholm, 1910    *The Encyclopaedia Britannica*, 1929
