

# HUMAN EVOLUTION: NOTES

## THE PLACE OF HUMANS IN THE ANIMAL KINGDOM

- Humans are **mammals**, belonging to the class **Mammalia**, because their bodies are covered in hair and they suckle their young. All mammals also have three ossicles (bones) in the middle ear.
- Humans are classified in the class **Mammalia**, order **Primates**. Primates include humans, apes, orangutans, gorillas and chimpanzees.
- The order **Primates** includes the superfamily **Hominoidae** that is subdivided into two families, i.e. **Hominidae** (Great Apes and humans) and **Hylobatidae** (gibbons).
- Family **Hominidae** is divided into two subfamilies, i.e. **Ponginae** and **Homininae**.
- Some scientists divide the subfamily **Homininae** into two more tribes, i.e. **Hominini** and **Gorillini**.
- Humans, gorillas and chimpanzees fall under the subfamily **Homininae** and the orangutans are part of **Ponginae**.
- Humans belong to the genus **Homo**.

All members of the family **Hominidae** are known as **hominids** (Great Apes and humans). However, certain sources refer to hominids as only humans and their fossil ancestors (the Great Apes excluded). A new term, **hominins**, is currently used by scientists, which refers to humans and their fossil ancestors.

**NB:** In this study guide we will use the term **hominin** for bipedal humans and their fossil ancestors. The term **hominid** will be used when reference is made to the Great Apes as well as humans and their fossil ancestors. **Great Apes** are also often referred to as **African Apes**.

Individuals of the genera **Ardipithecus** and **Australopithecus** as well as early **Homo**-species are considered fossil ancestors of modern humans. Modern humans are classified in the genus and species **Homo sapiens**. These three genera have ape-like as well as human characteristics and they are sometimes referred to as 'ape-men'. See p. 9 for a more detailed discussion of these three genera.

 Branch,2000 Canadians recognize the importance of a clean and healthy environment We understand that the capacity of the  
 environment to supply materials and absorb wastes is finite But to be effective at reducing our collective impact on the  
 environment we need systematic accessible and relevant information Without such information we are unable to understand  
 and respond to environmental change Human activity and the environment 2000 meets this need with a collection of  
 environmental statistics brought together from many sources The report provides a statistical picture of Canada s  
 environment with special emphasis on human activity and its relationship to natural systems air water soil plants and animals  
 The fact that much of Canada s economy is supported by the wealth of its natural resources raises questions about the  
 sustainability of our resource use Can we maintain air water and soil quality Can we continue to extract renewable and non  
 renewable resources at current rates Are we implementing conservation and recycling measures This edition of Human
