**Atomic Environments** Neil Shafer Oatsvall, 2023-02-21 In *Atomic Environments* Neil S Oatsvall examines how top policymakers in the Truman and Eisenhower administrations used environmental science in their work developing nuclear strategy at the beginning of the Cold War. While many people were involved in research and analysis during the period in question, it was at the highest levels of executive decision making where environmental science and nuclear science most clearly combined to shape the nation's policies. Because making and testing weapons dealing with fallout and nuclear waste and finding uses for radioactive byproducts required advanced understanding of how nuclear systems interacted with the world, policymakers utilized existing networks of environmental scientists, particularly meteorologists, geologists, and ecologists, to understand and control the United States' use of nuclear technology. Instead of profiling individuals, Oatsvall focuses on executive institutions, especially the leadership of the Atomic Energy Commission (AEC) and high-level officials in the Truman and Eisenhower White Houses, including the presidents themselves. By scrutinizing institutional policymaking practices and agendas at the birth of the nuclear age, a constant set of values becomes clear. *Atomic Environments* reveals an emerging technocratic class that consistently valued knowledge about the environment to help create and maintain a nuclear arsenal despite its existential threat to life on earth and the negative effects many nuclear technologies directly had on ecosystems and the American people alike. *Atomic Environments* is divided into five chapters, each of which probes a different facet of the entanglement between environment, nuclear technologies, and policymaking. The first three chapters form a rough narrative arc about nuclear weapons. Chapter One situates bombs in their natural habitat by considering why nuclear tests occurred where they did and what testers thought they revealed about the natural environment and how they influenced it. Focusing on nuclear fallout, Chapter Two argues that nuclear tests actually functioned as a massive uncontrolled experiment in world environments and human bodies that intermingled medicine, nuclear science, and environmental science. Chapter Three shows how the environmental knowledge gained in the first two chapters led to nuclear test ban treaty talks during the Eisenhower era, when the advancement of environmental knowledge and the natural world itself became crucial grounds of contention in the creation of nuclear test detection and evasion systems. The last two chapters step away from weapons to question how other nuclear technologies and facets of the U.S. nuclear program interacted with the natural world. Chapter Four examines agriculture's place in the U.S. nuclear program from breakthrough advances in agricultural science, including the use of radioisotopes and the direct application of radiation to food, to atomic agriculture's public relations value as a peaceful proxy, which shifted the moral calculus and further leveraged the U.S. government's atomic power. Chapter Five shows how knowledge of the natural world and the functioning of its systems proved important to uncovering the most effective ways to dispose of nuclear waste. Running throughout Oatsvall consistently demonstrates how the natural world and the scientific disciplines that study it became integral parts of nuclear science rather than adversarial fields of knowledge. But while

nuclear technologies heavily depended on environmental science to develop those same technologies frequently caused great harm to the natural world Moreover while some individuals expressed real anxieties about the damage wrought by nuclear technologies policymakers as a class consistently made choices that privileged nuclear boosterism and secrecy prioritizing institutional values over the lives and living systems that agencies like the AEC were ostensibly charged to protect In the end Oatsvall argues that although policymakers took their charge to protect and advance the welfare of the United States and its people seriously they often failed to do so because their allegiance to the U S nuclear hierarchy blinded them to the real risks and dangers of the nuclear age **Sovereignty Or Security?** Shelagh Grant,1988 Over the past decade the Soviet Union has experienced problems in petroleum production and a slowdown in the discovery of new petroleum reserves The author here presents problems now facing the Soviet economy generally and its energy industry in particular A study of the numerous and diverse influences responsible for the dramatic change in the Canadian government s northern policies during the 1940s and their subsequent impact on the Yukon and the Northwest Territories This history is relevant to current debate over Arctic sovereignty and northern defense Acidic paper Annotation copyrighted by Book News Inc Portland OR **Poor Relation** Stuart Macintyre,2010-07-01 What are the social sciences What do they do How are they practised in Australia The Poor Relation examines the place of the social sciences from economics and psychology to history law and philosophy in the teaching and research conducted by Australian universities Across sixty years The Poor Relation charts the changing circumstances of the social sciences and measures their contribution to public policy In doing so it also relates the arrangements made to support them and explains why they are so persistently treated as the poor relation of science and technology **The Guns at Last Light** Rick Atkinson,2013-05-14 Tells the dramatic story of the titanic battle for Western Europe from D Day to the thrust to the heart of the Third Reich **COLD WAR LABORATORY** Martin J. Collins,2002-11-17 In 1946 before the start of the Cold War with the Soviet Union the Army Air Forces established Project RAND a groundbreaking think tank designed to link leaders in the military and aircraft industry Modern war was now total war a contest between entire societies and demanded the commitment of peacetime preparation Martin J Collins examines the critical years of this experiment through an evolving cast of key individuals and investigates in depth the scientific and social birth of systems analysis **Aquatic Sciences and Fisheries Abstracts** ,1989-03 **Forthcoming Books** Rose Arny,1989-09 **The Publishers' Trade List Annual** ,1985 **"Seeking a Place to Stand"** Marie Anne Laberge,1995
