Life Science Crossings Practical:

Practical Theology and the Interpretation of Crossing Boundaries Bert Roebben, 2003 In October 2002 the Tilburg Professor of Practical Theology Tjeu van Knippenberg retired In order to honour him as a bright scholar in the field of fundamental practical theology and pastoral care 23 of his colleagues at Tilburg University and elsewhere Nijmegen and Leuven contributed to this festschrift Their attention is focused on the concept of boundaries in practical theology between context and Christian tradition church and society personal identity and Christian narrative individual and community Different research projects out of the Tilburg tradition of practical theology are presented from an empirical hermeneutical perspective

Self-directed learning research and its impact on educational practice Elsa Mentz, Roxanne Bailey, 2021-05-17 This scholarly book is the third volume in an NWU book series on self directed learning and is devoted to self directed learning research and its impact on educational practice The importance of self directed learning for learners in the 21st century to equip themselves with the necessary skills to take responsibility for their own learning for life cannot be over emphasised The target audience does not only consist of scholars in the field of self directed learning in Higher Education and the Schooling sector but includes all scholars in the field of teaching and learning in all education and training sectors The book contributes to the discourse on creating dispositions towards self directed learning among all learners and adds to the latest body of scholarship in terms of self directed learning Although from different perspectives all chapters in the book are closely linked together around self directed learning as a central theme following on the work done in Volume 1 of this series Self Directed Learning for the 21st Century Implications for Higher Education to form a rich knowledge bank of work on self directed learning

Nursing Theorists and Their Work Martha Raile Alligood, PhD, RN, ANEF, 2013-09-24 The most comprehensive of its kind Nursing Theorists and Their Work 8th Edition provides an in depth look at 39 theorists of historical international and significant importance Each chapter features a clear consistent presentation of a key nursing philosophy or theory Case studies critical thinking activities and in depth objective critiques of nursing theories help bridge the gap between theory and application Critical Thinking Activities at the end of each theorist chapter help you to process the theory presented and apply it to personal and hypothetical practice situations A case study at the end of each theorist chapter puts the theory into a larger perspective demonstrating how it can be applied to practice A Brief Summary in each theorist chapter helps you review for tests and confirm your comprehension A Major Concepts Definitions box included in each theorist chapter outlines the theory s most significant ideas and clarifies content specific vocabulary Each theorist chapter is written by a scholar specializing in that particular theorist s work often having worked closely with the theorists to provide the most accurate and complete information possible Beginning chapters provide a

strong foundation on the history and philosophy of science logical reasoning and the theory development process Diagrams for theories help you visualize and better understand inherently abstract concepts Pictures of theorists as well as a listing of contact information for each individual enables you to contact the source of information directly Theorist chapters have been reviewed and edited by the theorist validating the accounts set forth in the text for currency and accuracy An extensive bibliography at the conclusion of each theorist chapter outlines numerous primary and secondary sources of information ideal for both undergraduate and graduate research projects NEW Quotes from the theorist make each complex theory more memorable NEW Chapter on Afaf Meleis profiles a theorist who has shaped theoretical development in nursing and explores her transition theory NEW Need to Know Information is highlighted to streamline long complex passages and help you review key concepts NEW Points for Further Study at the end of each chapter direct you to assets available for additional information

Proteins Crossing Membranes Stephen Rothman, 2019-01-17 In an intriguing series of experiments carried out many years ago a common scientific belief feted by no less than three Nobel prizes was brought into question The observations were about proteins the molecules that the genetic code specifies and that are in one way or another central to all of life s activities The experiments however were not about what proteins do but how they are moved in particular how they are moved from where they are made to where they act The results of these studies conflicted with the standard view of how this happens and thus became controversial The standard view the vesicle theory of protein secretion envisions proteins being carried within and out of cells en masse in membrane bound sacs or vesicles The controversial experiments demonstrated that to the contrary individual protein molecules cross the relevant membranes as a result of their own motion This was thought to be impossible at the time **Proteins Crossing Membranes** is a personal narrative that tells the story of the controversy Among other things the author illustrates that scientists like the rest of us can rigidly hold onto their beliefs despite evidence that they are misguided Key Features Reviews the data in support and critical of the vesicle theory of protein secretion Explores the ways scientists respond to evidence that challenges a favored theory Documents the author s personal experiences in this conflict laden situation

The Emory-Tibet Science Initiative, a Novel Journey in Cross-Cultural Science Education Arri Eisen, Meena M. Balgopal, Gillian Hue, Robin Nusslock, Joel Zivot, 2022-05-10

Crossing the threshold Andreas C. Göransson, 2021-02-18 The theory of evolution is considered the unifying theory of biology An accurate understanding of evolution is vital both for the understanding of diverse topics in biology but also for societal issues such as antibiotic resistance or biodiversity In contrast decades of research in science education have revealed that students have difficulties to accurately understand evolutionary processes such as mutation and natural selection The majority of this research relies on a conceptual framework of so called key concepts variation selection inheritance derived from scholarly descriptions of natural selection Recent research suggests that non domain specific concepts such as randomness probability spatial and temporal scales so called threshold concepts are important for evolution

understanding in addition to the key concepts. Thus many important elements of evolutionary theory are counter intuitive or lie outside direct perception. Hence representations such as visualizations, models and simulations are considered to be important for teaching and learning evolution. While the importance of visualizations is generally acknowledged for science education, less is known about how visual design can facilitate students' understanding of threshold concepts such as random mutations or spatial scales. This thesis uses the Model of Educational Reconstruction (MER) as the guiding framework for exploring the significance of threshold concepts by analysing the conceptual content of students' explanations and extant visualizations of natural selection. MER combines scientific content with teaching and learning perspectives for the analysis and design of learning environments. Content analysis of visualizations available online showed that most fail to fully represent the basic principles of natural selection: variation, selection and inheritance. Moreover, the representational potential of visualizations was seldom used to represent threshold concepts such as randomness in origin of variation. Visualizations were also biased to animals as the context of evolution. Similarly, upper secondary and tertiary students' explanations of natural selection were seldom complete in terms of the basic principles and threshold concepts such as randomness were often lacking. Especially significant was the almost complete lack of randomness in upper secondary students' explanations. In addition, threshold concepts were context sensitive across the items used: bacteria, cheetah and salamander. For example, spatial scale and randomness was significantly more common in responses to the bacteria item compared to the cheetah and salamander items. Considering the results from these studies, three interactive visualizations were developed: evolution of antibiotic resistance and fur colouration in mice. The visualization design was conducted iteratively following a Design Based Research approach and evaluated in classroom settings in secondary and upper secondary Swedish schools. The results showed that visualizations targeting randomness and genetic level events such as mutations can guide students towards a more scientific conception of natural selection. However, there were differences across the visualizations and student samples. In addition, while students often inferred randomness from the visuals, the results showed that integration of randomness into explanations of natural selection may be challenging. Hence, future research should explore the role of guidance and reflection for students' understanding of randomness. The thesis also discusses the role of students' intuitive conceptions in relation to the use of interactive visualizations and how these preconceptions interact with the presented message. By using the theory of frame semantics, framing effects and conceptual integration, students' issues of achieving an accurate understanding of evolution are discussed in relation to the theory of conceptual change. Implications for teaching and learning natural selection as well as visualization design for learning are also discussed.

Evolutionsteorin förstås ofta från biologers perspektiv. Vikten av en korrekt och användbar evolutionsförståelse har därför ofta betonats inte minst för eleverna förståelse inom biologins olika delområden. Men också för att fatta beslut i samhällsfrågor som exempelvis antibiotikaresistens. Många av de centrala delarna av evolutionsteorin är kontraintuitiva eller abstrakta och decennier av forskning har visat att elever

har svårigheter att föreställa sig evolutionära processer som mutation och naturligt urval. Representationer som visualiseringar, modeller och simuleringar är därför viktiga för att ge elever direkta erfarenheter av evolutionära processer. En omvärdering av visualiseringar är allmänt accepterad inom naturvetenskapsundervisning, och det är mindre känt hur visualiseringars utformning specifikt bidrar till att utveckla eleverns förståelse av vetenskapliga fenomen som evolution. Dessutom har forskningen på eleverns evolutionsförståelse till stor del fokuserat på så kallade nyckelbegrepp: variation, selektion och arv, som har lett till en vetenskapliga beskrivningar av evolutionsteorin. Dessa begrepp antas vara nödvändiga, men också tillräckliga för eleverns evolutionsförståelse. Dock har vikten av icke-domenspecifika begrepp kopplade till evolutionsteorin som slump, sannolikhet, spatial och temporala skalor så kallade tröskelbegrepp inte undersökts i någon hög grad. Den här avhandlingen använder sig av Model of Educational Reconstruction för att utforska betydelsen av tröskelbegrepp för evolutionsförståelse. Med utgångspunkt i den vetenskapliga beskrivningen och historiken undersöks förståelsen av tröskelbegrepp i befintliga visualiseringar för lärare och elever, och eleverns förklaringar för att formulera designprinciper för interaktiva visualiseringar av evolution. Dessutom beskrivs utvecklingen av ett antal interaktiva visualiseringar samt undersökningar av deras potentiella användning i klassrumsmiljöer. Avhandlingen diskuterar även betydelsen av eleverns intuitiva förståelser i relation till användandet av interaktiva visualiseringar och hur dessa förståelser interagerar med det presenterade budskapet. Genom användning av ramsemantisk teori inklusive framingeffekter och blendteori diskuteras eleverns svårigheter och utveckling av en vetenskaplig evolutionsförståelse i relation till tidigare teorier om begreppsförståelse. Konsekvenser av ramsemantisk teori och framingeffekter i visuella medier diskuteras även i relation till visuell design för lärare. Group Practice Journal, 2006
