\_\_\_Photosynthesis\_\_\_ is the process by which plants produce their own food in the presence of \_\_\_water\_\_\_, \_\_\_carbon dioxide\_\_\_, and \_\_\_sunlight\_\_\_. Photosynthesis occurs in the organelle called the \_\_\_chloroplasts\_\_\_ that is found only in plants. Plants contain a green pigment known as \_\_\_chlorophyll\_\_\_, which is located in "pancake" shaped structures called \_\_\_thylakoids\_\_\_. Energy from the Sun excites \_\_\_electrons\_\_\_ within the \_\_\_Photosystems\_\_\_. These charged-up electrons pass through the membrane to be picked up by the electron carrier \_\_\_ATP\_\_\_ to form NADPH. Hydrogen ions pass through a protein, known as Glucose, to transform ADP into \_\_\_NADP+\_\_\_. Both the NADPH and ATP produce a carbohydrate called \_\_\_ATP synthase\_\_\_ from carbon dioxide from the atmosphere. \_\_\_oxygen\_\_\_ is released as a waste product.

Gregory,1989-10-31 Photosynthesis the capture of light energy by living organisms is a simple enough concept but its investigation draws on the resources of disciplines from all fields of science The aim of this text is to provide a clear stimulating and essentially affordable coverage for undergraduate students of biology The activity of science is debate and practical experiment its product is a body of propositions which at any given time reflects the judgment and prejudices of those taking part The value of a proposition is related to the conceivable alternatives and writing it down without its context creates the false impression that science progresses by compilation of an increasing list of absolute truths It does not the facts and figures presented in the following pages have no intrinsic value unless they can be used by the reader to support an argument or point of view In short the reader is urged to respond So what to every item Secondly ideas like other foods should be date stamped science is inseparable from its history I have set out time charts to represent the evolution of our understanding in certain areas I have assumed that the reader is pursuing a course with a content of biochemistry microbiology and plant science or has access to basic texts I have assumed also that common methods such as spectrophotometry chromatography and electrophoresis as well as the techniques of molecular biology will be either part of the same course or in active use nearby
