unexpectedly begin to struggle and appear to fall off track without apparent reason. A well implemented early warning system therefore can help educators identify students at risk of dropping out and assign and monitor interventions to keep them on track for graduation. Despite the popularity of early warning systems, research on their design and implementation is sparse. *Early Warning Systems and Targeted Interventions for Student Success in Online Courses* is a cutting edge research publication that examines current theoretical frameworks, research projects and empirical studies related to the design, implementation and evaluation of early warning systems and targeted interventions and discusses their implications for policy and practice. Moreover, this book will review common challenges of early warning systems and dashboard design and will explore design principles and data visualization tools to make data more understandable and therefore more actionable. Highlighting a range of topics such as curriculum design, game based learning and learning support, it is ideal for academicians, policymakers, administrators, researchers, education professionals, instructional designers, data analysts and students.
