

DAILY ATTENTION TO CHAIN AND GUIDE BAR

1. At the end of each day of operation, remove the chain and guide bar. Clean the sawdust from the guide bar mounting pad, the clutch area and the clutch cover. Clean out the oil discharge hole in the guide bar mounting pad. Clean the chain groove in the guide bar.
2. The chain should be filed and cleaned. Then the chain should be immersed in a can of light oil until ready for the next use.
3. Sprocket nose guide bars must be lubricated while still warm from use, at the end of each day of cutting. Using needle nose of Lube Gun #24258 filled with HOMELITE ALL-TEMP Multi-Purpose grease, pump grease into the sprocket nose bearing through the small grease hole in the side of the bar nose. Keep pumping until the dirty grease is forced out and fresh

grease comes out of the nose. This removes sawdust, dirt and moisture from the bearing. If bar is lubricated when cold, the old grease may not come out.

A sprocket nose bearing is good as long as it turns freely with no roughness or binding. However, it can be replaced with a new sprocket nose assembly (HOMELITE A-57050) whenever necessary. Both the chain drive and nose sprockets should be replaced whenever a new chain is being installed.
