

**FOUNDATION CONSTRUCTION REQUIREMENTS:** (Based on 2015 IRC)

- Foundations: construction must be capable of accommodating all loads and of transferring the resulting loads to the supporting soil.
- Fill soils that support footings and foundations must be designed, installed and tested.

**DECLARATION:** I hereby declare that the above is a true and correct copy of the original document.

- Surface drainage must be directed to a storm sewer, culvert or other approved point of collection that does not create a hazard.
- Lots must be graded to drain surface water away from foundation walls.
- Grading must be a min. of 2" within the first 10 ft

**HOW TESTS** *(Based on 2012 tests)*

- Where quantifiable data include expensive soils, compressible soils, drifting soils or other questionable soil characteristics, the building official must determine whether to require a test limit.
- In lieu of a complete geotechnical evaluation, assume the values in Table A001.4.1

**FOUNDATION ELEVATION** *(See page 140 for details)*

- On-pipe fittings: The top of any exterior lavatories must extend above the structure of the street gutter at point of discharge or the roofline as approved drainage device a min. of 12" above.
- Alternate structure: are permitted subject to the approval of the building official, provided that it can be demonstrated that required coverage to the point of discharge away from the structure is obtained at all times under the above

### EDUCATION THREE

**Abstract**

- All 3 Neurectomies: types only on perimeter boundaries.
- Grade to the finished ground level adjoining the building at all exterior walls.

**Abstracts from the American Psychological Association**

- Used mostly in warm-climates, where being a close to the ground and the frost line is close to the surface.
- In this system the footing is shallow and the ground floor is a concrete slab.
- Many slab-on-grade systems allow the concrete footing foundation and surface to be poured at the same time.

## Discussion

- **Crawl Space:** an under-floor space that is not a basement
- Found in all climates but predominates in temperate regions
- In this system, the insulated wooden ground floor is supported above grade on a foundation wall made of concrete or concrete block.

- Basement: a story that is of a story above grade plane
- Used in the coldest part of the country, where frost lines penetrate deep footings.
- Foundation systems are usually constructed of concrete or concrete block foundations/walls.
- Drainage and waterproofing details with basement systems

b. Starting with a low probability measure of gross change is difficult to make (1%) of 10 to 10, with a moderate probability measure (10%) of 10 to 10, with a high probability measure (10%) of 10 to 10.

**Abstract** The purpose of this study was to determine if there were differences in the prevalence of risk factors associated with the development of type 2 diabetes mellitus between two groups of subjects who had been exposed to different levels of physical activity during their childhood. A total of 609 subjects from the Bogalusa Heart Study were included in the analysis. They were divided into two groups based on their level of physical activity during childhood: low ( $n = 307$ ) and high ( $n = 302$ ). The prevalence of risk factors associated with the development of type 2 diabetes mellitus was determined for each group. The results showed that the prevalence of risk factors was significantly higher in the low physical activity group than in the high physical activity group. These findings suggest that increased physical activity during childhood may reduce the risk of developing type 2 diabetes mellitus.
