**Introduction to Geophysical Prospecting ... Second Edition** Milton Burnett Dobrin, 1960     **Geophysics in the Affairs of Mankind** Lee C. Lawyer, Charles Carpenter Bates, Robert B. Rice, 2001 This personalized narrative is both a technical and economic history showing how exploration geophysics evolved from simple scientific beginnings into a sophisticated science impacting civilization in diverse ways. It presents geophysics as an intriguing scientific and technical field full of sharp contrasts revealing it as an unusual blend of the theoretical and the practical the laboratory and the field the nonprofit effort and the profit making venture a cornerstone of peace and an implement of war. Written by members of the profession well acquainted with many of the key actions and players this book describes intriguing developments and applications that took place within three interrelated fields of earth physics exploration geophysics seismology and oceanography during the never ending search for oil and natural gas. Stressing challenge and change this chronicle is bracketed by two major flex points in Western civilization the initial waging of deadly global war 1914-18 and the conclusion in the 1990s of the Cold War that threatened civilization with nuclear annihilation. It is a complex story of people and events that highlights the emergence of major industries on the international scene. The book is must reading for all practicing earth scientists and their families investors in the industry and people interested in economic geology public and world affairs military warfare the history of science and technology environmental sciences and even outdoor adventure.

**Electromagnetic Seabed Logging** Stéphane Sainson, 2017-03-30 Seabed logging SBL gathers the electromagnetic methods of marine subsoil exploration and more specifically those dedicated to the exploration of oil and gas at sea. Appeared in 2000 these techniques with more than 500 industrial jobs present after 15 years of commercial success a discovery record rate of nearly 90 % and seem now to turn the world in the offshore exploration field. Proposing a serious index of the presence of hydrocarbons electromagnetic SBL coupled with seismic reflection survey is probably the first reliable method for direct detection of hydrocarbons. Complementing the structural concepts of oil exploration used since the 1920s the SBL now radically modifies the approach and the philosophies of exploration especially those then including drilling and well logging activities. Electromagnetic Seabed Logging a new tool for oil and gas prospecting which original publication in French was in 2012 presents these methods its principles advantages limitations instruments modeling and applications. It is also designed to be a tool for a reflection on the use of electromagnetic energy for the exploration in a conductive medium as sea water thus setting the theoretical and practical limits of these investigations for future developments. This book is intended of course for the geophysicists and the petroleum geologists but also for the earth scientists the reservoir engineers and the log analysts     **Geophysics in the Affairs of Man** Charles C. Bates, Thomas F. Gaskell, Robert B. Rice, 2016-01-22

Geophysics in the Affairs of Man describes how geophysics has affected human affairs with emphasis on the geophysical enterprise as an interplay of technical social and economic factors. Many of the key and intriguing developments that took place within several major fields of geophysics are divided into seven epochs roughly broken into decades. Topics covered include the origins of the profession of geophysics earth physics and oceanography and geophysical aspects of undersea warfare. This book is comprised of nine chapters and begins with a discussion on some antecedents to the modern day profession of geophysics through World War I. The following chapters focus on the golden days of exploration geophysics classical seismology during the war years the growth of geophysics during the 1950s and the nature of the geophysical exploration industry. The closing chapter presents the views of numerous geophysicists about what they consider the most outstanding actions they were ever involved in as well as what makes the profession unique. This monograph is written primarily for geophysicists geologists and geological engineers.
