Fda Good Practice Guide:

Data Integrity and Data Governance Robert D McDowall, 2018-11-06 Data integrity is the hottest topic in the pharmaceutical industry Global regulatory agencies have issued guidance after guidance after guidance in the past few years most of which does not offer practical advice on how to implement policies procedures and processes to ensure integrity These guidances state what but not how Additionally key stages of analysis that impact data integrity are omitted entirely The aim of this book is to provide practical and detailed help on how to implement data integrity and data governance for regulated analytical laboratories working in or for the pharmaceutical industry It provides clarification of the regulatory issues and trends and gives practical methods for meeting regulatory requirements and guidance Using a data integrity model as a basis the principles of data integrity and data governance are expanded into practical steps for regulated laboratories to implement The author uses case study examples to illustrate his points and provides instructions for applying the principles of data integrity and data governance to individual laboratory needs This book is a useful reference for analytical chemists and scientists management and senior management working in regulated laboratories requiring either an understanding about data integrity or help in implementing practical solutions Consultants will also benefit from the practical guidance provided

Downstream Industrial Biotechnology Michael C. Flickinger, 2013-07-17 DOWNSTREAM INDUSTRIAL BIOTECHNOLOGY An affordable easily accessible desk reference on biomanufacturing focused on downstream recovery and purification Advances in the fundamental knowledge surrounding biotechnology novel materials and advanced engineering approaches continue to be translated into bioprocesses that bring new products to market at a significantly faster pace than most other industries Industrial scale biotechnology and new manufacturing methods are revolutionizing medicine environmental monitoring and remediation consumer products food production agriculture and forestry and continue to be a major area of research The downstream stage in industrial biotechnology refers to recovery isolation and purification of the microbial products from cell debris processing medium and contaminating biomolecules from the upstream process into a finished product such as biopharmaceuticals and vaccines Downstream process design has the greatest impact on overall biomanufacturing cost because not only does the biochemistry of different products e g peptides proteins hormones antibiotics and complex antigens dictate different methods for the isolation and purification of these products but

contaminating byproducts can also reduce overall process yield and may have serious consequences on clinical safety and efficacy. Therefore, downstream separation scientists and engineers are continually seeking to eliminate or combine unit operations to minimize the number of process steps in order to maximize product recovery at a specified concentration and purity. Based on Wiley's Encyclopedia of Industrial Biotechnology, Bioprocess, Bioseparation, and Cell Technology, this volume features fifty articles that provide information on downstream recovery of cells and protein capture, process development, and facility design. Equipment, PAT in downstream processes, downstream cGMP operations, and regulatory compliance. It covers Cell wall disruption and lysis, Cell recovery by centrifugation and filtration, Large scale protein chromatography, Scale down of biopharmaceutical purification operations, Lipopolysaccharide removal, Porous media in biotechnology, Equipment used in industrial protein purification, Affinity chromatography, Antibody purification, monoclonal and polyclonal, Protein aggregation, precipitation and crystallization, Freeze drying of biopharmaceuticals, Biopharmaceutical facility design and validation, Pharmaceutical bioburden testing, Regulatory requirements. Ideal for graduate and advanced undergraduate courses on biomanufacturing, biochemical engineering, biopharmaceutical facility design, biochemistry, industrial microbiology, gene expression technology, and cell culture technology. Downstream Industrial Biotechnology is also a highly recommended resource for industry professionals and libraries.

Validation of Chromatography Data Systems Robert D McDowall, 2016-11-23. Guiding chromatographers working in regulated industries and helping them to validate their chromatography data systems to meet data integrity, business, and regulatory needs. This book is a detailed look at the life cycle and documented evidence required to ensure a system is fit for purpose throughout the lifecycle. Initially providing the regulatory data integrity and system life cycle requirements for computerised system validation, the book then develops into a guide on planning, specifying, managing, risk, configuring, and testing a chromatography data system before release. This is followed by operational aspects such as training, integration, and IT support, and finally retirement. All areas are discussed in detail with case studies and practical examples provided as appropriate. The book has been carefully written and is right up to date, including recently released FDA data integrity guidance. It provides detailed guidance on good practice and expands on the first edition, making it an invaluable addition to a chromatographer's bookshelf.
