Environmental Sustainability Role Of Green Technologies:

Environmental Sustainability P. Thangavel, G. Sridevi, 2014-11-06 Covers different categories of green technologies e.g. biofuels, renewable energy sources, phytoremediation etc. in a nutshell. Focuses on next generation technologies which will help to attain sustainable development. The chapters widely cover for students, faculties and researchers in the scientific arena of Environmentalists, Agriculturalists, Engineers and Policy Makers. The World Environment Day 2012 is prepared to embrace green economy. The theme for 2012 encompasses various aspects of human living ranging from transport to energy to food to sustainable livelihood. Green technology, an eco friendly clean technology, contributes to sustainable development to conserve the natural resources and environment which will meet the demands of the present and future generations. The proposed book mainly focuses on renewable energy sources, organic farming practices, phyto bioremediation of contaminants, biofuels, green buildings and green chemistry. All of these eco friendly technologies will help to reduce the amount of waste and pollution and enhance the nation's economic growth in a sustainable manner. This book is aimed to provide an integrated approach to sustainable environment and it will be of interest not only to environmentalists but also to agriculturists, soil scientists and bridge the gap between the scientists and policy makers. *Green Technologies and Environmental*

Sustainability Ritu Singh, Sanjeev Kumar, 2017-04-05 In the present scenario, green technologies are playing a significant role in changing the course of nation's economic growth towards sustainability and providing an alternative socio economic model that will enable present and future generations to live in a clean and healthy environment in harmony with nature. Green technology, which is also known as clean technology, refers to the development and extension of processes, practices and applications that improve or replace the existing technologies, facilitating society to meet their own needs while substantially decreasing the impact of human on the planet and reducing environmental risks and ecological scarcities. The concepts of Green Technologies if endorsed and pervaded into the lives of all societies will facilitate the aim of the Millennium Development Goals of keeping the environment intact and improve it for the civilization to survive. Green Technologies and Environmental Sustainability is focused on the goals of green technologies which are becoming increasingly important for ensuring sustainability. This book provides different perspectives of green technology in sectors like energy, agriculture, waste management and economics and contains recent advancements made towards sustainable development in the field of bioenergy, nanotechnology, green chemistry, bioremediation, degraded land reclamation. This book is written for a large and broad readership including researchers, scientists, academicians and readers from diverse backgrounds across various fields such as nanotechnology, chemistry, agriculture, environmental science, water engineering, waste management and energy. It could also serve as a reference book for graduates and post graduate students, faculties, environmentalist and industrial personnel who are working in the area of green technologies. **Environmental Sustainability Using Green**

Sustainable Green Technologies for Environmental Management Shachi Shah, V. Venkatramanan, Ram Prasad, 2019-02-19 Our Earth is considered as a natural system which organizes and controls itself However the present scale of anthropogenic activity is unprecedented in the history of mankind compelling the intelligentia to ponder over the scientific causes of the problems processes and sustainable and pragmatic solutions The

current rate of resource use and consumption pattern are depleting the planet's finite resources and damaging life supporting ecosystems. A large number of toxic substances are increasingly found in air, water, soil, and flora and fauna. We are in the midst of a period of increasing interconnected and complex global challenges that seek action across temporal and spatial scales, diverse sectors, and concerted efforts from global citizens. The environment, on account of human's action, has been experiencing imbalances and ecological catastrophe. Environmental issues like global climate change, biodiversity loss, the rapid depletion of natural resources, degradation of global commons, stratospheric ozone depletion, have been restricting the safe operating space and transgressing the planetary boundaries, endangering the existence of human societies. The global environmental problems, if not scientifically managed, may end up in the civilizational collapse. Nevertheless, the underlying commonality among these environmental issues is interrelatedness, complexity, and difficulty in identifying and implementing solutions. The global environmental challenges can be managed by adopting sustainable green technologies, which dovetails the principles of environmental sustainability with social and ecological sustainability. Green growth is construed as a new development paradigm that sustains economic growth while at the same time ensuring environmental sustainability.

Green Technologies and Business Practices: An IT Approach Ordóñez de Pablos, Patricia, 2012-08-31. Green technology plays an important role in the achievement of environmental sustainability. Tax incentives, carbon taxes, and rising fossil fuel costs are motivating increased growth and development of green products and services, many of which are the result of innovative discoveries in biotechnology and nanotechnology. *Green Technologies and Business Practices: An IT Approach* is an international platform that brings together academics, researchers, lecturers, policy makers, practitioners, and persons in decision-making positions from all backgrounds who ultimately share new theories, research findings, and case studies together, enhancing understanding and collaboration of green issues in business and the role of information technologies, and also analyze recent developments in theory and practice. Furthermore, this book demonstrates the capacity of green models and policies, information technology, and management for the mutual understanding, prosperity, and overall well-being of all the citizens in the world. This title is perfect for politicians, professors, policy makers, government officers, and students alike.
