Structures and Materials Conference, 1966 **Who Owns Whom**, 2005 **Fuzzy Logic and the Semantic Web** Elie Sanchez, 2006-02-20 These are exciting times in the fields of Fuzzy Logic and the Semantic Web and this book will add to the excitement as it is the first volume to focus on the growing connections between these two fields

This book is expected to be a valuable aid to anyone considering the application of Fuzzy Logic to the Semantic Web because it contains a number of detailed accounts of these combined fields written by leading authors in several countries The Fuzzy Logic field has been maturing for forty years These years have witnessed a tremendous growth in the number and variety of applications with a real world impact across a wide variety of domains with humanlike behavior and reasoning And we believe that in the coming years the Semantic Web will be major field of applications of Fuzzy Logic This book the first in the new series *Capturing Intelligence* shows the positive role Fuzzy Logic and more generally Soft Computing can play in the development of the Semantic Web filling a gap and facing a new challenge It covers concepts tools techniques and applications exhibiting the usefulness and the necessity for using Fuzzy Logic in the Semantic Web It finally opens the road

to new systems with a high Web IQ. Most of today's Web content is suitable for human consumption. The Semantic Web is presented as an extension of the current web in which information is given well defined meaning better enabling computers and people to work in cooperation. For example within the Semantic Web computers will understand the meaning of semantic data on a web page by following links to specified ontologies. But while the Semantic Web vision and research attracts attention as long as it will be used two valued based logical methods no progress will be expected in handling ill structured uncertain or imprecise information encountered in real world knowledge. Fuzzy Logic and associated concepts and techniques more generally Soft Computing has certainly a positive role to play in the development of the Semantic Web. Fuzzy Logic will not be supposed to be the basis for the Semantic Web but its related concepts and techniques will certainly reinforce the systems classically developed within W3C. In fact Fuzzy Logic cannot be ignored in order to bridge the gap between human understandable soft logic and machine readable hard logic. None of the usual logical requirements can be guaranteed there is no centrally defined format for data no guarantee of truth for assertions made no guarantee of consistency. To support these arguments this book shows how components of the Semantic Web like XML, RDF, Description Logics, Conceptual Graphs, Ontologies can be covered with in each case a Fuzzy Logic focus. First volume to focus on the growing connections between Fuzzy Logic and the Semantic Web. Keynote chapter by Lotfi Zadeh. The Semantic Web is presently expected to be a major field of applications of Fuzzy Logic. It fills a gap and faces a new challenge in the development of the Semantic Web. It opens the road to new systems with a high Web IQ. Contributed chapters by Fuzzy Logic leading experts.
