Risk Regulation in the Internal Market Maria Weimer, 2019-03-13 This book offers a topical inquiry into the legal and political limits of EU regulation in the field of risk and new technologies surrounded by techno scientific complexity uncertainty and societal contestation It uses agricultural biotechnology as a paradigmatic example to illustrate the complex intertwinement between environmental public health economic and social concerns in risk regulation Weimer analyses the drawbacks of the EU approach to agricultural biotechnology showing that its reductionism i e the narrow understanding of GMO risks as well as the exclusion of broader societal concerns related to environmental and social sustainability has undermined both the legitimacy and effectiveness of EU regulation in this area Resistance to this approach however has also triggered legal innovations prompting us to re think EU internal market law including the way in which it manages the tensions between unity and diversity and between social and economic concerns This text offers fresh and original insights into how far the EU can go in harmonizing regulatory approaches to risk At the same time it proposes new ways of re thinking EU risk regulation to make it more responsive to different perspectives on risk and technology A unique feature of this book is that it contributes to various strains of scholarship including risk regulation internal market law public administration and studies of governance and regulation as well as connecting these themes to broader debates about the legitimacy of European integration and new ways of differentiated integration As a result it assists in re imagining the EU internal market and its regulation as a site of diversity

Research, Quality, Competitiveness Attilio Stajano, 2008-09-22 The European Union EU was launched as a response to
the economic dominance of the United States and to a lesser degree the Soviet Union The nations of Western Europe were
too small to compete against large scale and diversi ed economies on their own Six countries eventually expanding to 27 and
counting took a series of steps toward progressively deeper integration the removal of int nal tariffs the construction of a
common external tariff the elimination of many but not all non tariff barriers leading to a single market and the adoption of a
c mon currency by 15 of the member states The EU today equals and even exceeds the U S on many key indicators of
performance In the process two similar but nonetheless divergent models of social and economic life stand in contrast with
each other The U S is more committed to capitalism and does little to dilute its harsh edges while the nations of Europe
support wider social safety nets and more active regulation of commercial activity to mute the crueller aspects of the free
market Until recently the economic dynamism of the U S called into question whether the so called European social model
was sustainable in an era of globalization The EU was slipping in competitiveness and was being challenged by new global
pow houses like China and India Although the U S economy has slowed there is little indication that European countries are
capable of leveraging the situation to their advantage
