web what exactly is a fluid can we understand fluids with the laws already presented or will new laws emerge from their study the physical characteristics of static or stationary fluids and some of the laws that govern their behavior are the topics of this chapter

web some points to remember when solving fluid pressure problems the pressure due to the fluid always acts perpendicular the surface a particle underwater will feel the same pressure from all directions pressure increases linearly with depth $p = \rho gh$ $p = \rho gh$ assumes a constant density and thus is valid only for incompressible

web these concepts are key to the solution of problems in fluid statics and lead to the following two points at the same depth in a static fluid have the same pressure the orientation of a surface has no bearing on the pressure at a point in a static fluid vertical depth is a key dimension in determining pressure change in a static fluid

the physics field of fluid statics thoughtco - Feb 02 2022

web apr 9 2018 fluid statics fluid statics is the field of physics that involves the study of fluids at rest because these fluids are not in motion that means they have achieved a stable equilibrium state so fluid statics is largely about understanding these fluid equilibrium conditions when focusing on incompressible fluids such as liquids as
