

Geometric Probability – Please put these on your own graph paper.

Find the probability of hitting the shaded area or length of the target with a randomly thrown dart that hits the target. All measurements are in centimeters. The formula is *Geometric Probability* = $\frac{\text{shaded area}}{\text{total area}}$ or $\frac{\text{shaded length}}{\text{total length}}$. For full credit, you **MUST SHOW** the formulas and calculations of the shaded area or length, the total area or length, and then a reduced fraction.
