*Financial Modeling* Stephane Crepey, 2013-06-13 Backward stochastic differential equations BSDEs provide a general mathematical framework for solving pricing and risk management questions of financial derivatives. They are of growing importance for nonlinear pricing problems such as CVA computations that have been developed since the crisis. Although BSDEs are well known to academics, they are less familiar to practitioners in the financial industry. In order to fill this gap, this book revisits financial modeling and computational finance from a BSDE perspective, presenting a unified view of the pricing and hedging theory across all asset classes. It also contains a review of quantitative finance tools including Fourier techniques, Monte Carlo methods, finite differences, and model calibration schemes. With a view to use in graduate courses in computational finance and financial modeling, corrected problem sets and Matlab sheets have been provided. Stéphane Crepey's book starts with a few chapters on classical stochastic processes, material and then fasten your seatbelt: the author starts traveling backwards in time through backward stochastic differential equations BSDEs. This does not mean that one has to read the book backwards like a manga. Rather, the possibility to move backwards in time, even if from a variety of final scenarios following a probability law, opens a multitude of possibilities for all those pricing problems whose solution is not a straightforward expectation. For example, this allows for framing problems like pricing with credit and funding costs in a rigorous mathematical setup. This is as far as I know, the first book written for several levels of audiences with applications to financial modeling and using BSDEs as one of the main tools, and as the song says, it's never as good as the first time. Damiano Brigo, Chair of Mathematical Finance, Imperial College London. While the classical theory of arbitrage-free pricing has matured and is now well understood and used by the finance industry, the theory of BSDEs continues to enjoy a rapid growth and remains a domain restricted to academic researchers and a handful of practitioners. Crepey's book presents this novel approach to a wider community of researchers involved in mathematical modeling in finance. It is clearly an essential reference for anyone interested in the latest developments in financial mathematics. Marek Musiela, Deputy Director of the Oxford Man Institute of Quantitative Finance. Recent Advances in Financial Engineering Masaaki Kijima, 2011. This book contains the proceedings of the KIER-TMU International Workshop on Financial Engineering 2010, which was held in Tokyo. It was for an exchange of new ideas in financial engineering among industry professionals and researchers from various countries. It has been held for two consecutive years since 2009 as a successor to the Daiwa International Workshop, which was held from 2004 to 2008 and is organized by the Institute of Economic Research of Kyoto University (KIER) and the Graduate School of Social Sciences of Tokyo Metropolitan University (TMU). The workshop serves as a bridge between academic researchers and practitioners. This book consists of eleven papers, all refereed, representing or related to the presentations at the workshop. The papers address state-of-the-art techniques in financial engineering. The Proceedings of the 2009 workshop were also published by World Scientific Publishing. *Commodity Option Pricing* Iain J. Clark, 2014-03-05.

Commodity Option Pricing A Practitioner s Guide covers commodity option pricing for quantitative analysts traders or structurers in banks hedge funds and commodity trading companies Based on the author s industry experience with commodity derivatives this book provides a thorough and mathematical introduction to the various market conventions and models used in commodity option pricing It introduces the various derivative products typically traded for commodities and describes how these models can be calibrated and used for pricing and risk management This book has been developed with input from traders and features examples using real world data together with relevant up to date academic research This book includes practical descriptions of market conventions and quote codes used in commodity markets alongside typical products seen in broker quotes and used in calibration Also discussed are commodity models and their mathematical derivation and volatility surface modelling for traded commodity derivatives Gold silver and other precious metals are addressed including gold forward and gold lease rates as well as copper aluminium and other base metals crude oil and natural gas refined energy and electricity There are also sections on the products encountered in commodities such as crack spread and spark spread options and alternative commodities such as carbon emissions weather derivatives bandwidth and telecommunications trading plastics and freight Commodity Option Pricing is ideal for anyone working in commodities or aiming to make the transition into the area as well as academics needing to familiarize themselves with the industry conventions of the commodity markets

**American-Type Options** Dmitrii S. Silvestrov, 2013-11-27 The book gives a systematical presentation of stochastic approximation methods for models of American type options with general pay off functions for discrete time Markov price processes Advanced methods combining backward recurrence algorithms for computing of option rewards and general results on convergence of stochastic space skeleton and tree approximations for option rewards are applied to a variety of models of multivariate modulated Markov price processes The principal novelty of presented results is based on consideration of multivariate modulated Markov price processes and general pay off functions which can depend not only on price but also an additional stochastic modulating index component and use of minimal conditions of smoothness for transition probabilities and pay off functions compactness conditions for log price processes and rate of growth conditions for pay off functions The book also contains an extended bibliography of works in the area This book is the first volume of the comprehensive two volumes monograph The second volume will present results on structural studies of optimal stopping domains Monte Carlo based approximation reward algorithms and convergence of American type options for autoregressive
