## **Life Science Formal Test March 2015:**

*House of Commons - Science and Technology Committee: Clinical Trials - HC 104 Great Britain: Parliament: House of Commons: Science and Technology Committee, 2013-09-17* Many of the trials taking place today are unregistered and unpublished meaning that the information that they generate remains invisible to both the scientific community and the public This undermines public trust slowing the pace of medical advancement and potentially putting patients at risk All trials conducted on NHS treatments and all other trials receiving public funding should be prospectively registered and their results published in a scientific journal While the focus should be on implementing this change for future trials the Government must also do what it can to ensure that historic trials are registered and published particularly where they have been publically funded The Government should also take steps to facilitate greater sharing of the raw data generated during a trial in a responsible and controlled way with the knowledge and consent of patients The report also draws attention to the recent fall in the number of trials taking place in the UK It finds that the need for multiple governance approvals from participating NHS organisations remained the biggest barrier to setting up a UK trial but that lack of public awareness was also a key issue Recruiting participants can also be a challenge The report calls on the Government to take its recommendations into account in ongoing discussions regarding the revision of European clinical trials legislation and in its response to the European Medicines Agency's consultation on the release of clinical trial data which closes at the end of this month

**Future of Drone Use** Bart Custers, 2016-10-15 Given the popularity of drones and the fact that they are easy and cheap to buy it is generally expected that the ubiquity of drones will significantly increase within the next few years. This raises questions as to what is technologically feasible now and in the future what is acceptable from an ethical point of view and what is allowed from a legal point of view. Drone technology is to some extent already available and to some extent still in development. The aim and scope of this book is to map the opportunities and threats associated with the use of drones and to discuss the ethical and legal issues of the use of drones. This book provides an overview of current drone technologies and applications and of what to expect in the next few years. The question of how to regulate the use of drones in the future is addressed by considering conditions and contents of future drone legislation and by analyzing issues surrounding privacy and safeguards that can be taken. As such this book is valuable to scholars in several disciplines such as law ethics sociology politics and public administration as well as to practitioners and others who may be confronted with the use of drones in their work such as professionals working in the military law enforcement disaster management and infrastructure management. Individuals and businesses with a specific interest in drone use may also find in the nineteen contributions contained in this volume unexpected perspectives on this new field of research and innovation. Bart Custers is Associate Professor and Head of Research at eLaw the Center for Law and Digital Technologies at Leiden University The Netherlands. He has presented his work at international conferences in the United States China Japan the Middle East and throughout Europe and has published over 80 scientific professional and popularizing publications including three books.

**Pharmaceutical Freedom** Jessica Flanigan, 2017-07-03 Jessica Flanigan defends patients rights of self medication on the grounds that same moral reasons against medical paternalism in clinical contexts are also reasons against paternalistic pharmaceutical policies including prohibitive approval processes and prescription requirements. *Intellectual Property and Public Health in the Developing World* Monirul Azam, 2016-05-30

Across the world developing countries are attempting to balance the international standards of intellectual property concerning pharmaceutical patents against the urgent need for accessible and affordable medicines. In this timely and necessary book Monirul Azam examines the attempts of several developing countries to walk this fine line. He evaluates the experiences of Brazil China India and South Africa for lessons to guide Bangladesh and developing nations everywhere. Azam's legal expertise concern for public welfare and compelling grasp of principal case studies make *Intellectual Property and Public Health in the Developing World* a definitive work. The developing world is striving to meet the requirements of the World Trade Organization's TRIPS Agreement on intellectual property. This book sets out with lucidity and insight the background of the TRIPS Agreement and its implications for pharmaceutical patents the consequences for developing countries and the efforts of certain representative nations to comply with international stipulations while still maintaining local industry and public health. Azam then brings the weight of this research to bear on the particular case of Bangladesh offering a number of specific policy recommendations for the Bangladeshi government and for governments the world over. *Intellectual Property and Public Health in the Developing World* is a must read for public policy makers academics and students non governmental organizations and readers everywhere who are interested in making sure that developing nations meet the health care needs of their people.
