Marghitu,Hamid Ghaednia,Jing Zhao,2021-11-11 This book deals with the simulation of the mechanical behavior of engineering structures mechanisms and components It presents a set of strategies and tools for formulating the mathematical equations and the methods of solving them using MATLAB For the same mechanical systems it also shows how to obtain solutions using a different approaches It then compares the results obtained with the two methods By combining fundamentals of kinematics and dynamics of mechanisms with applications and different solutions in MATLAB of problems related to gears cams and multilink

mechanisms and by presenting the concepts in an accessible manner this book is intended to assist advanced undergraduate and mechanical engineering graduate students in solving various kinds of dynamical problems by using methods in MATLAB. It also offers a comprehensive practice oriented guide to mechanical engineers dealing with kinematics and dynamics of several mechanical systems.

**An Engineer's Guide to MATLAB** Edward B. Magrab, Shapour Azarm, Balakumar Balachandran, James H. Duncan, Keith E. Herold, Gregory C. Walsh, 2011. For undergraduate engineering courses in Mechanical, Aeronautical, Civil and Electrical engineering that require use of MATLAB. An authoritative guide to generating readable, compact and verifiably correct Matlab programs. This highly respected guide helps students develop a strong working knowledge of MATLAB that can be used to solve a wide range of engineering problems. Since solving these problems usually involves writing relatively short one-time-use programs, the authors demonstrate how to effectively develop programs that are compact yet readable, easy to debug and quick to execute. Emphasis is on using MATLAB to obtain solutions to several classes of engineering problems so technical material is presented in summary form only. The new edition has been thoroughly revised and tested for software release 2009.
