**Problem 20D****CURRENT IN AND POTENTIAL DIFFERENCE ACROSS A RESISTOR****PROBLEM**

For the circuit from the previous section's sample problem, determine the current in and potential difference across the  $8.0\ \Omega$  resistor ( $R_4$ ) in the figure below.

**REASONING**

First find the equivalent resistance of the circuit. From this, determine the total circuit current. Then rebuild the circuit in steps, calculating the current and potential difference for the equivalent resistance of each group until the current in and potential difference across the specified  $8.0\ \Omega$  resistor are known.

**SOLUTION****1. Determine the equivalent resistance of the circuit.**

The equivalent resistance, which was calculated in the sample problem of the previous section, is  $5.9\ \Omega$ .

**2. Calculate the total current in the circuit.**

Substitute the potential difference and equivalent resistance in  $\Delta V = IR$ , and rearrange the equation to find the current delivered by the battery.

$$I = \frac{\Delta V}{R_{eq}} = \frac{(12.0\text{ V})}{(5.9\ \Omega)} = 2.0\text{ A}$$

**3. Determine a path from the equivalent resistance found in step 1 to the specified resistor.**

Review the path taken to find the equivalent resistance in the diagram below, and work backward through this path. The equivalent resistance for the entire circuit is the same as the equivalent resistance for group (c). The top resistors in group (c), in turn, form the equivalent resistance for group (b), and the rightmost resistor in group (b) is the specified  $8.0\ \Omega$  resistor.

The book brings into sharp relief the social and economic consequences arising from the highly centralized character of Communist Party rule. Because conditions regarded as essential for effective scientific research conflict with the form of political control prevailing in the Soviet Union, the Soviet scientists working environment provides a fruitful context for assessing the methods adopted by the Communist Party. This study is an excellent base from which to explore some important sources of change in contemporary Soviet politics. The book is also a survey of the present state of natural science in the U S S R. Topics of concern range from the scientists' background and social characteristics, institutions, status and leadership to their social relations and effectiveness. The relationship of the Communist Party to the scientists is examined in detail.      *The United States Catalog*, 1906      **The Publishers Weekly**, 1908      **Pamphlets on Biology**, 1916      *Collected Reprints* Selig Hecht, 1916      *Visualization in Science Education* John K. Gilbert, 2006-03-30 Visualization in Science Education draws on the insights from cognitive psychology, science and education by experts from Australia, Israel, Slovenia, UK and USA. It unites these with the practice of science education, particularly the ever increasing use of computer managed modelling packages, especially in chemistry. The first section explores the significance and intellectual standing of visualization. The second section shows how the skills of visualization have been developed practically in science education. This is followed by accounts of how the educational value of visualization has been integrated into university courses in physics, genomics and geology. The fourth section documents experimental work on the classroom assessment of visualization. An endpiece summarises some of the research and development needed if the contribution of this set of universal skills is to be fully exploited at all levels and in all science subjects.      *Industrial Arts Index*, 1924      *American Men of Science*, 1949      *The Cumulative Book Index*, 1922      **The American Bookseller**, 1883      *The Best Books* William Swan Sonnenschein, 1926      **The Best Books: H, Natural science.
