ules for $so(n+1)$ into generalized Verma modules for $so(n+1)$ both being induced from fundamental form representations of a parabolic subalgebra. We apply the F method to derive explicit formulas for such homomorphisms. In particular we find explicit formulas for the generators of the intertwining operators of the related branching problems restricting generalized Verma modules for $so(n+1)$ to $so(n)$. As consequences we derive closed formulas for all conformal symmetry breaking differential operators in terms of the first order operators d and d and certain hypergeometric polynomials. A dominant role in these studies is played by two infinite sequences of symmetry breaking differential operators which depend on a complex parameter. Their values at special values of appear as factors in two systems of factorization identities which involve the Branson-Gover operators of the Euclidean metrics on R^n and R^{n-1} and the operators d and d as factors respectively. Moreover they naturally recover the gauge companion and Q curvature operators of the Euclidean metric on the subspace R^{n-1} respectively.

Brown, 2015-11-13 The debate about access to scientific research raises questions about the current effectiveness of scholarly communication processes. This book explores from an independent point of view the current state of the STM publishing market, new publishing technologies and business models as well as the information habit of researchers, the politics of research funders and the demand for scientific research as a public good. The book also investigates the democratisation of science including how the information needs of knowledge workers outside academia can be embraced in future **Environmental Politics for a Changing World** Ronnie D. Lipschutz, Doreen Stabinsky, 2018-07-12 This book argues that environmental problems are first and foremost political and therefore about power. Using a framework of political economy and political ecology the authors deconstruct current environmental problems to identify root causes and address those problems through mobilization of collective action and social power. The second edition also offers updated examples and stories of political struggles and the actors involved. Explicit attention to various forms of power in environmental politics including structural and social power. Local politics and collective action as related to global environmental politics. Discussion of emerging issues such as synthetic biology, commodification and financialization of nature including carbon markets and geoengineering.
