

### LUCAS RB106 ELECTRONIC DYNAMO REGULATOR CONVERSION USING THE BOSCH 30019 REGULATOR:

Dr H. Holden, 2012.

Use your previous notions: Do not attempt to work on the electrical systems of your vintage car unless you are qualified to do so, or can get help from someone who is. The use of any freely given designs by any party is entirely at their discretion and at their own risk.

Bosch produced an electronic control module for dynamos for VW's and Porsches (the 912) and they are very well designed unit. This is an example of the very few electronic dynamo regulators ever made and is a true current & voltage regulator and not a "compensated" type like the two bobbin Lucas RB106, but like the electronic equivalent of the 3 bobbin electromechanical regulator.

The only issue to solve when using this one is that the Bosch unit was configured to drive a Bosch dynamo field winding, where the field winding was not earthed (as it is in the Lucas unit) but rather it was connected to the armature or D output instead. Therefore the Bosch regulator unit's field drive output pulls the field winding connection to earth (sinks current) rather than sourcing it, as in the Lucas system. The fix for this merely involves adding a few parts, which can be enclosed near the Bosch Unit. An MJ2955 transistor to *invert* (reverse the polarity of the field coil drive), some drive resistors and the 6A10 diode to damp the field coil's reverse voltage and protect the transistor. I chose to mount the Bosch unit to a stainless steel plate adapter onto an RB106 base, which is a convenient place to mount the MJ2955 transistor. The circuit connections for this version are shown in Figure 5A.
