Evolutionary Manufacturing, Design and Operational Practices for Resource and Environmental Sustainability

Kamalakanta Muduli, Sachindra Kumar Rout, Sunil Sarangi, Sardar M. N. Islam, Aezeden Mohamed, 2024-07-31 This book highlights the important use of digital technologies and the latest developments in mechanical and industrial engineering to enhance environmental and resource sustainability Sustainable Development Goals SDGs have as their overarching objective the reduction or eradication of a wide range of global problems including but not limited to poverty climate change environmental degradation and inequality Digital technologies DTs have the potential to be exploited to meet the goals associated with the circular economy CE and sustainable development Additive manufacturing AM cyber physical systems CPS and blockchain technology are examples of DT enabled technologies that are helpful for businesses that seek to shift to a circular economic model With the remanufacturing of products applications that make use of virtual reality and augmented reality in addition to the Internet of Things simplify the construction of strategic decision models that reduce time and expense while simultaneously increasing productivity In addition the utilization of big data analytics helps businesses discover previously undisclosed trends and unlock numerous opportunities for environmental and resource sustainability Employing analytics makes it feasible to collect helpful information regarding the socio environmental impact of a product as well as consumption factors over the entirety of a product's life cycle This book contains 44 comprehensive chapters and is divided into five parts Part 1 delves deeply into sustainable operational practices and supply chain management The impact that digital technology enabled operational techniques have on product life cycles is investigated as well as the design of efficient remanufacturing processes environmentally friendly logistics and warehousing practices sustainable designs for distributed energy supply systems and efficient recycling procedures Part 2 provides a perspective on advanced materials and developments for sustainable manufacturing The chapters in this section address sustainable material development and its application in the circular economy concept Included here is an in depth exploration of cutting edge technology for synthesis processing fabrication process optimization testing and performance evaluation of advanced materials Part 3 covers sustainable manufacturing practices and looks at the problems faced by the industry when using digital technologies in their operations as well as the possible benefits Part 4 examines sustainable innovation in mechanical design It addresses all aspects of mechanical design that contribute to sustainable innovation for nation building Part 5 delves into heat transfer and fluid flow concepts for sustainable product development and applications The chapters explain how to construct sustainable energy systems by reducing the total amount of energy that is utilized enhancing the efficiency of the process of energy conversion and making use of sources of energy that are renewable Audience This book has a wide audience in academic institutions and engineers in a variety of manufacturing industries It will also appeal to economists and policymakers working on the circular economy clean tech investors industrial decision makers and environmental

professionals *Materials Performance*, 2005 **Corrosion and Corrosion Protection of Wind Power Structures in Marine Environments** Andreas Momber, 2024-04-07 Corrosion and Corrosion Protection of Wind Power Structures in Marine Environments Volume 2 Corrosion Protection Measures offers the first comprehensive review on corrosion and corrosion protection of offshore wind power structures. The book extensively discusses corrosion phenomena and corrosion types in different marine corrosion zones including the modeling of corrosion processes and interactions between corrosion and structural stability. The book addresses important design issues namely materials selection relevant to their performance in marine environments, corrosion allowance and constructive design. Active and passive corrosion protection measures are emphasized with special sections on cathodic corrosion protection and the use of protective coatings. Seawater related issues associated with cathodic protection such as calcareous deposit formation, hydrogen formation and fouling are discussed. With respect to protective coatings the book considers for the first time complete loading scenarios including corrosive loads, mechanical loads and special loads and covers a wide range of coating materials. Problems associated with fouling and bacterial induced corrosion are extensively reviewed. The book closes with a chapter on recent developments in maintenance strategies, inspection techniques and repair technologies. The book will be of special interest to materials scientists, materials developers, corrosion engineers, maintenance engineers, civil engineers, steel work designers, mechanical engineers, marine engineers, chemists and coating specialists. Offshore wind power is an emerging renewable technology and a key factor for a cleaner environment. Offshore wind power structures are situated in a demanding and challenging marine environment. The structures are loaded in a complex way including mechanical loads and corrosive loads. Corrosion is one of the major limiting factors to the reliability and performance of the technology. Maintenance and repair of corrosion protection systems are particularly laborious and costly. Explores the literature between 1950 and 2020 and contains over 2000 references. Offers the most complete monograph on the issue. Covers all aspects of corrosion protection in detail including coatings, cathodic protection, corrosion allowance, constructive design as well as maintenance and repair. Delivers the most complete review on corrosion of metals in marine offshore environments. Focuses on all aspects of offshore wind power structures namely foundations, towers, internal sections, connection flanges and transformation platforms. **Readers' Guide to Periodical Literature** Anna Lorraine Guthrie, Bertha Tannehill, Neltje Marie Tannehill Shimer, 1925 An author subject index to selected general interest periodicals of reference value in libraries. **A Guide to Publications of the Executive Branch** Frederic J.
