*Practitioners' Guide to Human Rights Law in Armed Conflict* Daragh Murray,2016-11-03 Although the relationship between international human rights law and the law of armed conflict has been the subject of significant recent academic discussion there remains a lack of comprehensive guidance in identifying the law applicable to specific situations faced by military forces Providing guidance for armed forces and practitioners on the detailed application of international human rights law during armed conflict this book fills that gap Part 1 of the volume details foundational information relating to international human rights law and human rights institutions the types of operations that States armed forces engage in and how the law of armed conflict and international human rights law apply to regulate different situations Part 2 provides practical guidance as to the legal regulation of specific situations including discussion of the conduct of hostilities detention operations humanitarian assistance cyber operations and investigations This book is the result of an in depth process involving both academic and practitioner experts in the law of armed conflict and international human rights law who were convened in meetings at Chatham House chaired by Elizabeth Wilmshurst Distinguished Fellow at Chatham House The group included Professor Francoise Hampson Essex University Professor Dapo Akande Oxford University Charles Garraway Fellow at Essex University Professor Noam Lubell Essex University Michael Meyer British Red Cross and Daragh Murray Lecturer at Essex University      *20 Years of Computational Neuroscience* James M Bower,2013-07-11 When funding agencies and policy organizations consider the role of modeling and simulation in modern biology the question is often posed what has been accomplished This book will be organized around a symposium on the 20 year history of the CNS meetings to be held as part of CNS 2010 in San Antonio Texas in July 2010 The book like the symposium is intended to summarize progress made in Computational Neuroscience over the last 20 years while also considering current challenges in the field As described in the table of contents the chapter s authors have been selected to provide wide coverage of the applications of computational techniques to a broad range of questions and model systems in neuroscience The proposed book will include several features that establish the history of the field For each article its author will select an article originally appearing in a CNS conference proceedings from 15 20 years ago These short less than 6 page articles will provide illustrations of the state of the field 20 years ago The new articles will describe what has been learned about the subject in the following 20 years and pose specific challenges for the next 20 years The second historical mechanism will be the reproduction of the first 12 years of posters from the CNS meeting These posters in and of themselves have become famous in the field they hang in the halls of the NIH in Bethesda Maryland and were constructed as allegories for the state and development of computational neuroscience The

posters were designed by the book's editor who will for the first time provide a written description of each poster
