Matlab Code For Automatic Image Registration:

Computer Vision for Structural Dynamics and Health Monitoring Dongming Feng, Maria Q. Feng, 2020-10-02

Provides comprehensive coverage of theory and hands on implementation of computer vision based sensors for structural health monitoring This book is the first to fill the gap between scientific research of computer vision and its practical applications for structural health monitoring SHM It provides a complete state of the art review of the collective experience that the SHM community has gained in recent years It also extensively explores the potentials of the vision sensor as a fast and cost effective tool for solving SHM problems based on both time and frequency domain analytics broadening the application of emerging computer vision sensor technology in not only scientific research but also engineering practice Computer Vision for Structural Dynamics and Health Monitoring presents fundamental knowledge important issues and practical techniques critical to successful development of vision based sensors in detail including robustness of template matching techniques for tracking targets coordinate conversion methods for determining calibration factors to convert image pixel displacements to physical displacements sensing by tracking artificial targets vs natural targets measurements in real time vs by post processing and field measurement error sources and mitigation methods The book also features a wide range of tests conducted in both controlled laboratory and complex field environments in order to evaluate the sensor accuracy and demonstrate the unique features and merits of computer vision based structural displacement measurement Offers comprehensive understanding of the principles and applications of computer vision for structural dynamics and health monitoring Helps broaden the application of the emerging computer vision sensor technology from scientific research to engineering practice such as field condition assessment of civil engineering structures and infrastructure systems Includes a wide range of laboratory and field testing examples as well as practical techniques for field application Provides MATLAB code for most of the issues discussed including that of image processing structural dynamics and SHM applications Computer Vision for Structural Dynamics and Health Monitoring is ideal for graduate students researchers and practicing engineers who are interested in learning about this emerging sensor technology and advancing their applications in SHM and other engineering problems It will also benefit those in civil and aerospace engineering energy and computer science

Recent Advances and the Future Generation of Neuroinformatics Infrastructure Xi Cheng, Daniel R. Weinberger, Daniel Marcus, John Van Horn, Venkata Satyanand Mattay, Qian Luo, 2015-12-11 The huge volume of multi modal neuroimaging data across different neuroscience communities has posed a daunting challenge to traditional methods of data sharing data archiving data processing and data analysis Neuroinformatics plays a crucial role in creating advanced methodologies and tools for the handling of varied and heterogeneous datasets in order to better understand the structure and function of the brain These tools and methodologies not only enhance data collection analysis integration interpretation modeling and dissemination of data but also promote data sharing and collaboration This Neuroinformatics Research Topic aims to summarize the state of art of the current achievements and explores the directions for the future generation of neuroinformatics infrastructure The publications present solutions for data archiving data processing and workflow data mining and system integration methodologies Some of the systems presented are large in scale geographically distributed and already have a well established user community Some discuss opportunities and methodologies that facilitate large scale parallel data processing tasks under a heterogeneous computational environment We wish to stimulate on going discussions at the level of the neuroinformatics infrastructure including the common challenges new technologies of maximum benefit key features of next generation infrastructure etc We have asked leading research groups from different research areas of neuroscience neuroimaging to provide their thoughts on the development of a state of the art and highly efficient neuroinformatics infrastructure Such discussions will inspire and help guide the development of a state of the art highly efficient neuroinformatics infrastructure
