An Introduction to MATLAB for Behavioral Researchers Christopher R. Madan, 2013-12-18 MATLAB is a powerful data analysis program but many behavioral science researchers find it too daunting to learn and use An Introduction to MATLAB for Behavioral Researchers by Christopher R Madan is an easy to understand hands on guide for behavioral researchers who have no prior programming experience Written in a conversational and non intimidating style the author walks students step by step through analyzing real experimental data Topics covered include the basics of programming the implementation of simple

behavioral analyses and how to make publication ready figures More advanced topics such as pseudo randomization of trial sequences to meet specified criteria and working with psycholinguistic data are also covered Interesting behavioral science examples and datasets from published studies such as visualizing fixation patterns in eye tracking studies and animal search behavior in two dimensional space help develop an intuition for data analysis which is essential and can only be developed when working with real research problems and real data

Cognitive Control of Action David A. Rosenbaum, 2024-01-23 In the World Library of Psychologists series international experts present career long collections of what they judge to be their finest pieces extracts from books key articles salient research findings and their major practical theoretical contributions In this volume David A Rosenbaum reflects on his distinguished career as an eminent scholar in the field of human perception and performance Offering a unique perspective on the cognitive psychology of physical action control the book charts Rosenbaum s development as one of the pioneers of the field Featuring a newly written introduction in which the author offers a unique insight into his initial work on the movement precuing technique along with coverage of other phenomena and models related to the translation of mental life into physical behavior the book is essential reading for students and researchers interested in human perception motor control and embodiment

Computational Modeling in Cognition Stephan Lewandowsky, Simon Farrell, 2010-11-29 An accessible introduction to the principles of computational and mathematical modeling in psychology and cognitive science This practical and readable work provides students and researchers who are new to cognitive modeling with the background and core knowledge they need to interpret published reports and develop and apply models of their own The book is structured to help readers understand the logic of individual component techniques and their relationships to each other
