**Role of Lipids in Virus Assembly** Jamil S. Saad, Delphine M. Muriaux, 2015-07-28 RNA enveloped viruses comprise several families belonging to plus and minus strand RNA viruses such as retroviruses flavoviruses and orthomyxoviruses Viruses utilize cellular lipids during critical steps of replication like entry assembly and egress Growing evidence indicate important roles for lipids and lipid nanodomains in virus assembly This special topic covers key aspects of virus membrane interactions during assembly and egress especially those of retroviruses and Ebola virus EBOV Virus assembly and release involve specific and nonspecific interactions between viral proteins and membrane compartments Retroviral Gag proteins assemble predominantly on the PM Despite the great progress in identifying the factors that modulate retroviral Gag assembly on the PM there are still gaps in our understanding of precise mechanisms of Gag membrane interactions Studies over the last two decades have focused on the mechanisms by which other retroviral Gag proteins interact with membranes during assembly

These include human immunodeficiency virus HIV Rous sarcoma virus RSV equine infectious anemia virus EIAV Mason Pfizer monkey virus M PMV murine leukemia virus MLV and human T lymphotropic virus type HTLV 1 Additionally assembly of filoviruses such as EBOV also occurs on the inner leaflet of the PM The articles published under this special topic highlight the latest understanding of the role of membrane lipids during virus assembly egress and release

**Imaging from Cells to Animals In Vivo** Margarida Barroso,Xavier Intes,2020-12-03 Imaging from Cells to Animals In Vivo offers an overview of optical imaging techniques developed over the past two decades to investigate biological processes in live cells and tissues It comprehensively covers the main imaging approaches used as well as the application of those techniques to biological investigations in preclinical models Among the areas covered are cell metabolism receptor ligand interactions membrane trafficking cell signaling cell migration cell adhesion cytoskeleton and other processes using various molecular optical imaging techniques in living organisms such as mice and zebrafish Features Brings together biology and advanced optical imaging techniques to provide an overview of progress and modern methods from microscopy to whole body imaging Fills the need for a comprehensive view of application driven development and use of new tools to ask new biological questions in the context of a living system Includes basic chapters on key methods and instrumentation from fluorescence microscopy and imaging to endoscopy optical coherence tomography and super resolution imaging Discusses approaches at different length scales and biomedical applications to the study of single cell whole organ and whole organism behavior Addresses the impact on discovery such as cellular function as implicated in human disease and translational medicine for example in cancer diagnosis

Understanding and Evaluating Research Sue L. T. McGregor,2017-10-25 Understanding and Evaluating Research A Critical Guide shows students how to be critical consumers of research and to appreciate the power of methodology as it shapes the research question the use of theory in the study the methods used and how the outcomes are reported The book starts with what it means to be a critical and uncritical reader of research followed by a detailed chapter on methodology and then proceeds to a discussion of each component of a research article as it is informed by the methodology The book encourages readers to select an article from their discipline learning along the way how to assess each component of the article and come to a judgment of its rigor or quality as a scholarly report

*Biotrophic Plant-Microbe Interactions* Pietro D. Spanu, Ralph Panstruga, 2017-04-20 Throughout their life plants interact with all sorts of microbes Some of these are detrimental and cause disease some interactions are mutually beneficial for both partners It is clear that most if not all of the interactions are regulated by highly complex checks and balances sustained by signalling and exchange of messengers and nutrients The interactions where both partners are alive for a significant part of their time together are called biotrophic In this e book we bring together 33 articles representing the current state of the art in research about diverse biotrophic plant microbe associations aimed at describing and understanding how these complex and ubiquitous partnerships work and ultimately support much of the land based biosphere **Recent Advances in**

**Symbiosis Research: Integrative Approaches** M. Pilar Francino, Mónica Medina, 2017-02-02 Traditionally symbiosis research has been undertaken by researchers working independently of one another and often focused on a few cases of bipartite host symbiont interactions New model systems are emerging that will enable us to fill fundamental gaps in symbiosis research and theory focusing on a broad range of symbiotic interactions and including a variety of multicellular hosts and their complex microbial communities In this Research Topic we invited researchers to contribute their work on diverse symbiotic networks since there are a large variety of symbioses with major roles in the proper functioning of terrestrial or aquatic ecosystems and we wished the Topic to provide a venue for communicating findings across diverse taxonomic groups A synthesis of recent investigations in symbiosis can impact areas such as agriculture where a basic understanding of plant microbe symbiosis will provide foundational information on the increasingly important issue of nitrogen fixation climate change where anthropogenic factors are threatening the survival of marine symbiotic ecosystems such as coral reefs animal and human health where unbalances in host microbiomes are being increasingly associated with a wide range of diseases and biotechnology where process optimization can be achieved through optimization of symbiotic partnerships Overall our vision was to produce a volume of works that will help define general principles of symbiosis within a new conceptual framework in the road to finally establish symbiology as an overdue central discipline of biological science
