Tips for Your Shop

Benchtop Table Saw Sled

The table of the portable saw I use in my shop is often not large enough to cut anything other than small pieces safely and accurately. So I decided to add a crosscut sled.

I cut a couple of dados in the underside of the sled to ride over rails that will be fit into the miter

slots later. These dados correspond to the position of the miter slots on the saw, as shown below.

The miter channels on my saw were too small to accept most manufactured runners and miter bars. So I used a piece of 1/2" drywall channel that I picked up at a local

home improvement center to make a set of rails for the sled to slide on.

The rails are easy to make. First, cut the drywall channel to a length that's a little longer than the miter slot. Then press-fit the channel into the miter slot. You'll find the channel sticks up about 1/8" above the table top. This way, the dados can be guided by the channels as you push the sled across the table when making crosscuts.

Once I finish using the sled, the channels can be removed from the slots and stored away with the sled until the next time they're needed.
