

Chapter 2

From Conception to Birth

Genes and Chromosomes

- Conception begins as a zygote, single cell formed from the union of two gametes: sperm and ovum
 - Homozygous: referring to two genes of one pair that are exactly the same in every letter in their code. Most gene pairs are homozygous
- DNA (deoxyribonucleic acid): the chemical composition of the molecules that contain the genes, which are the chemical instructions for cells to manufacture various proteins
- Chromosome: one of the 46 molecules of DNA that virtually every cell of the human body contains and that contain all of the genes. Other creatures has fewer or more chromosomes
 - Humans have 21,000 genes
 - 46 chromosomes, which are arranged in 23 pairs
 - not in a gamete (otherwise called a reproductive chromosome)

Variations among people

- Allele: a variation that makes a gene different in some way from other genes for the same characteristics. Many genes never vary; others have several possible alleles
 - Heterozygous: referring to two genes of one pair that differ in some way. Typically one allele has only a few base pairs that differ from the other member of the pair

Triplets: set of three three pairs where each specifies production of one of 20 possible amino acids

Genetic expression can be important whether or not a gene is expressed, which means that it becomes active in forming the person

- No single genes for homosexuality, just combinations of it

Myelination alters genes and continues throughout life

- Microbiome: all of the microbes with all of their genes in a community
- Copy number variations: the various repeats of deletions of base pairs that genes have
 - Everyone has them, correlates with every disease and conditions

Genotype and Phenotype

- Genotype: a collection of genes within a person
- Phenotype: person's actual appearance and behavior; observable characteristics of a person

This book introduces Unitary Developmental Theory UDT to the field of psychology. The first of two volumes, it introduces the UDT model and examines its application to psychological development and mental health recovery. The book presents a comprehensive model of UDT using 15 phases showing how this model can be applied to fields including psychoanalysis, cognitive psychology, and humanist psychology.
