Biosciences II James Sneyd, 2005-06-13 This book presents a series of models in the general area of cell physiology and signal transduction with particular attention being paid to intracellular calcium dynamics and the role played by calcium in a variety of cell types Calcium plays a crucial role in cell physiology and the study of its dynamics lends insight into many different cellular processes In particular calcium plays a central role in muscular contraction olfactory transduction and synaptic communication three of the topics to be addressed in detail in this book In addition to the models much of the underlying physiology is presented so that readers may learn both the mathematics and the physiology and see how the models are applied to specific biological questions It is intended primarily as a graduate text or a research reference It will serve as a concise and up to date introduction to all those who wish to learn about the state of calcium dynamics modeling

and how such models are applied to physiological questions *The Legacy of Tatjana Afanassjewa* Jos Uffink, Giovanni Valente, Charlotte Werndl, Lena Zuchowski, 2020-11-28 This book presents a collection of essays that explore the life and works of Tatjana Afanassjewa 1876 1964 a Russian Dutch physicist mathematician Readers will discover a scientist whose work on the foundations of thermodynamics significantly influenced the field itself as well as the philosophy of physics This book highlights the philosophical consequences of her work in physics and mathematics and discusses historical aspects of her writings on the foundations of physics In addition it features English translations and critical reviews of key selections from her texts First and foremost the book highlights the numerous contributions that Afanassjewa made to the field In particular the authors examine her work on the foundations of thermodynamics and statistical physics starting in the 1920s and extending to 1956 well after the untimely death of her husband in 1933 They also explore her almost entirely forgotten work on the didactics of mathematics In addition they discuss her influential collaboration with her husband the Austrian physicist Paul Ehrenfest 1880 1933 The portrait that emerges is that of a highly original physicist and mathematician whose legacy continues to influence scientists and philosophers today and whose lesser known works deserve more attention than they have received Readers will find a rich body of work that continues to this day to yield insights into the foundations of physics and mathematics American Book Publishing Record ,2007 **Hypoelliptic Estimates and Spectral Theory for Fokker-Planck Operators and Witten Laplacians** Francis Nier, Bernard Helffer, 2005-02-11 There has recently been a renewal of interest in Fokker Planck operators motivated by problems in statistical physics in kinetic equations and differential geometry Compared to more standard problems in the spectral theory of partial differential operators those operators are not self adjoint and only hypoelliptic The aim of the analysis is to give as generally as possible an accurate qualitative and quantitative description of the exponential return to the thermodynamical equilibrium While exploring and improving recent results in this direction this volume proposes a review of known techniques on the hypoellipticity of polynomial of vector fields and its global counterpart the global Weyl H rmander pseudo differential calculus the spectral theory of non self adjoint operators the semi classical analysis of Schr dinger type operators the Witten complexes and the Morse inequalities **Metrical Geometry** George Bruce Halsted, 1890 **The Software Encyclopedia** ,1986
