Solving Year 4 is the fourth of six books in the Maths Problem Solving series. The books have been written for teachers to use during the numeracy lesson. They cover the solving problem objectives from the numeracy framework. This book contains three chapters: Making decisions, Reasoning about numbers or shapes, and Problems involving real life money or measures. The books are designed in such a way that each section has six stages of questions to be worked through. Every stage is split into three levels for example 1a, 1b or 1c based on achievement. Each corresponding question from these levels follows the same line of questioning so that when the teacher talks about a certain question the solution process is the same for each level but the complexity of the sum varies.

Creative Activities in Mathematics - Book 2 Derek Holton, Duncan Symons, 2025-12-19. Problem based learning is a powerful alternative to drill and practice or skills based learning especially within maths but it can be difficult to source rich materials that engage an entire class. The Creative Activities in Mathematics series provides a wealth of investigations and open ended active learning activities designed to engage students with mathematics and develop their problem solving, collaboration and mathematical skills. Book Two provides nine different class activities suitable for students in upper primary school Years 4 to 7 along with teaching notes and staged lesson plans. Each activity is a whole class investigation with open ended answers that takes a particular scenario and develops it over four levels. This enables it to be used both at different year levels and with students of differing ability in the same class. All activities are firmly rooted in the Australian Curriculum Mathematics and linked to the content descriptors of the Number and Algebra, Measurement and Geometry, and Statistics and Probability strands.

Mathematics Teaching in the Early Years Carol Aubrey, 2013-04-03. Young children start school already able to do a surprising amount of mathematics. This book examines the nature and origin of subject knowledge and is based on information gathered from observing the interactions between teachers and their first year pupils. It demonstrates the necessity of the classroom teacher to draw on many kinds of knowledge in order to deal with various issues surrounding classroom learning and teaching. Two important core areas are knowledge of lesson structure and of subject matter. This book addresses the area of subject matter and as such it should be of interest to classroom teachers and lecturers in education.
