

ArcTool™

Application Software

Basic Description

The ArcTool™ application software package, integrated with a FANUC Robot and SYSTEM R-J3 Controller, provides the user with a unique process solution to robotic arc welding requirements.

The ArcTool Application Software package is designed to simplify and standardize the setup and operation of FANUC robot arc welding applications. Built-in arc welding functionality and point-and-shoot position teaching allow the operator to program the robot easily. With ArcTool, the operator has full control over the welding process. Arc welding instructions are written in easy to understand English rather than coded commands.

Full functionality is provided at the teach pendant for welding process setup, operation and troubleshooting, including diagnostics, status reporting and error recovery information.

Features

- Full interface and control through an arc welding specific, easy-to-read teach pendant with large display for full view of programs and data allows total application functionality.
- "Plug and play" simplicity with Lincoln Electric's PowerWave 455™, 450™, or STT™ (Surface Tension Transfer) power sources.
- Multi-tasking capability reduces execution time and allows control of external devices usually controlled by a programmable logic cell controller.
- Arc process and motion control improves weld process quality with the ability to look ahead,

resulting in faster arc starts and increased productivity.

- Power fail recovery capability increases production by allowing program and data recovery in the event of power loss.
- Configurable to work with all major brands of welding equipment.
- Interfaces with most types of servo driven or indexing positioners.
- TurboMove™ advanced servo control features allow quick, smooth point-to-point motion, which increases arc on-time and cycle speeds.
- Independent control of up to five motion groups supports overlapping motion of servo controlled peripheral devices.

Benefits

- Scratch start function reduces arc start faults with an automatic recovery process.
- Easy-to-load software is pre-packaged to match the robot configuration for ease of setup.

- Arc welding specific software makes it quick and easy for users to setup, teach and operate their system.
- Easy-to-use teach pendant editor allows quick setup and programming using common welding terminology.
- Arc and weave schedule data can be entered directly at the instruction or in an easy-to-use schedule data table; users are provided the most appropriate level of flexibility for their needs.
- Hot edit of positional data allows program position adjustment while production is running; this results in more robot uptime and part throughput.
- The "on-the-fly" feature permits changing of weld process data while the program is running production; operators can fine tune process data on-the-fly, improving weld quality without unnecessary downtime.
- I/O menu utilizes English labels on dedicated weld process I/O and peripheral device control I/O; this capability speeds up troubleshooting and repair.
