Optimizing Health: Improving the Value of Healthcare Delivery Franz

Porzsolt,Robert M. Kaplan,2007-07-07 As health care costs soar there is increasing interest in examining what society and particularly patients receive in return for these expenditures Optimizing Health brings together the best thinking from both sides of the Atlantic to explore these issues It employs disciplinary perspectives from economics ethics philosophy psychology clinical practice and epidemiology to explore various ways that value for patients have and can be determined It concludes with a discussion of changes required in practice research and health care systems to maximize the outcomes received from the provision of medical care services from the patient s perspective The first section of the book provides theoretical perspectives from economics and systems thinking that help us to focus on how one might determine the value of medical care for patients The next section considers the ethical and philosophical dilemmas that face developed countries in distributing medical care How is justice served and evidence based medicine employed to increase the value of medical care for patients The section on psychology deals with measuring outcomes from the patient s perspective and involving patients in medical decision making Measuring quality of life and gaining valid quality of life information when patients cannot respond for themselves are important topics covered by these chapters Other chapters consider ways that patients can become more involved in medical decision making with the expectation that this will increase the value of medical care for patients A major section of the book about clinical practice discusses problems that can reduce the value to patients of medical care These include overdiagnosis aggressive treatments that do not result in better patient outcomes findings that

earlier diagnosis does not always result in better outcomes and the extent of medical error in treatment The final sections deal with cost effectiveness analyses and applications of clinical epidemiology The chapters include a number of original investigations and applications of new methodologies All in all the volume is must reading for practitioners policy makers and researchers who want to find in one place the state of the art thinking and future directions of valuing medical care from the patient's perspective

Taneja, 2021-06-08 The COVID 19 pandemic represents an extraordinary inflection point that caught airlines worldwide unprepared causing CEOs to recalibrate their business models This book explains why this unprecedented pandemic is different from the past disruptions experienced by the airline industry during the past 50 years and what airlines and related businesses now can do to adapt to the dramatically changed marketplace This book presents two future scenarios continuous improvements and elastic supply These are considered in three specific contexts for the rebuilding of the airline business These contexts in the order of urgency with respect to change from the status quo are the following The first context is for airlines to become better prepared to deal with frequent and deeper disruptions that could be localized or globalized relating to such areas as climate change geopolitics and cybersecurity The second context is to collaborate and integrate within the much broader travel ecosystem possibly using platforms to innovate on new value systems The third context which has always been the case and drives the first two is for airlines to offer real solutions to people's travel needs solutions developed with imagination and turbocharged innovation even as we contemplate new technology airplanes and mobility as a service solutions This book is recommended reading for all senior level practitioners of airlines and related businesses as well as aviation policy makers worldwide
