

SECTION I

GENERAL DESCRIPTION

The Lycoming O-235-C Series and O-290-D engines (Figures 1-1, 1-2, and 1-3) are four cylinder, horizontally-opposed, air-cooled aircraft engines. Both engines are basically the same, the major difference being the size of the cylinder bore. The cylinder on the O-235-C Series engine has a bore of 4.375 inches, giving a displacement of 333.3 cubic inches, while the O-290-D cylinder has an I. D. of 4.875 inches with a resulting displacement of 389 cubic inches.

CYLINDERS (O-235-C Series) - On the O-235-C Series engines the cylinders are attached individually to the crankcase by 3/8 inch studs and through bolts in such a manner that each cylinder is secured by eight fastenings. Each cylinder is composed of an aluminum alloy cylinder head screwed and shrunk onto a forged alloy steel cylinder barrel. A single rocker box houses both the intake and exhaust valve rockers. The valve guides and valve seats are shrunk into the cylinder head. Two 1/4 inch studs and two 5/16 inch studs are located in each cylinder head to attach the upper intake pipe flange and exhaust manifold respectively. A 3/8 inch elbow is located in the lower front of each cylinder head near the intake port for attaching the oil drain tube. The oil drain tubes are connected to the crankcase by nipples in the crankcase. The rocker box covers are made of pressed steel, and each is fastened to the cylinder head by six fillister head,

1/4 inch slotted cap screws and shakeproof lockwashers. A 1/8 inch Allen head pipe plug is located in each cylinder head near the intake port for primer line connections. Provision for installing baffles and cowling is made by machined attaching devices at the rear of each cylinder head and two 1/4 inch tapped holes near the rocker box covers. The shroud tubes, which enclose the push rods, are located on the top of the cylinders and are provided with oil seals at both the crankcase and rocker box ends.

CYLINDERS (O-290-D) - Cylinders on the O-290-D engine are similar to those on the O-235-C except for the bore diameter (see first paragraph above) and the method of attaching the cylinder to the crankcase; four 1/2 inch and four 3/8 inch studs are used in place of the eight 3/8 inch studs used on the O-235-C.

CRANKCASE (O-235-C Series) - The crankcase of the O-235-C Series engine is made from two vertically divided sections of an aluminum casting and is held together on the upper side (see figure 2-1) by seven 1/4 inch bolts, washers and nuts. Two 3/8 inch through bolts are located on the left side of the crankcase in front of No. 2 cylinder and serve the dual function of holding the cases together and providing a fastening device for No. 1 cylinder on the opposite side. Two similar bolts are also located at the rear
