What's happening: energy, gravitational potential energy, heat energy, kinetic energy, law of conservation of energy, specific heat capacity

Prior Knowledge Questions: (Do these BEFORE using the Gizmo.)
A battery contains stored energy in the form of chemical energy.

1. What are some examples of devices that are powered by batteries? _____

2. What different forms of energy are demonstrated by these devices? _____

Gizmo Warm-up

Energy constantly changes from one form to another, but in a closed system, the total amount of energy always remains the same. This concept is known formally as the law of conservation of energy.

The Energy Conversion in a System Gizmo™ allows you to observe the law of conservation of energy in action. In the Gizmo, a suspended cylinder has gravitational potential energy. When the cylinder is released, the gravitational potential energy is converted into kinetic energy, which causes the stirrer in the water to spin.

1. What is the initial temperature (T_i) of the water? _____
2. Click Play (play). What happens as the cylinder drops? _____

3. What is the final temperature of the water? _____
4. Why do you think the temperature of the water increased? _____

Introduction to Renewable Energy Conversions Sergio Capareda, 2019-08-07 **Introduction to Renewable Energy Conversions** examines all the major renewable energy conversion technologies with the goal of enabling readers to formulate realistic resource assessments. The text provides step by step procedures for assessing renewable energy options and then moves to the design of appropriate renewable energy strategies. The goal is for future engineers to learn the process of making resource estimates through the introduction of more than 140 solved problems and over 165 engineering related equations. More than 120 figures and numerous tables explain each renewable energy conversion type. A solutions manual, PowerPoint slides and lab exercises are available for instructors. **Key Features:** Covers all major types of renewable energy with comparisons for use in energy systems. Builds skills for evaluating energy usage versus environmental hazards and climate change factors. Presents and explains the key engineering equations used to design renewable energy systems. Uses a practical approach to design and analyze renewable energy conversions. Offers a solutions manual, PowerPoint slides and lab activity plans for instructors.

Chemical Looping Systems for Fossil Energy Conversions Liang-Shih Fan, 2011-02-14 **Chemical Looping Systems for Fossil Energy Conversions** This book presents the current carbonaceous fuel conversion technologies based on chemical looping concepts in the context of traditional or conventional technologies. The key features of the chemical looping processes their ability to generate a sequestration ready CO₂ stream are thoroughly discussed. Chapter 2 is devoted entirely to the performance of particles in chemical looping technology and covers the subjects of solid particle design, synthesis, properties and reactive characteristics. The looping processes can be applied for combustion and/or gasification of carbon based material such as coal, natural gas, petroleum coke and biomass directly or indirectly for steam, syngas, hydrogen, chemicals, electricity and liquid fuels production. Details of the energy conversion efficiency and the economics of these looping processes for combustion and gasification applications in contrast to those of the conventional processes are given in Chapters 3, 4 and 5. Finally, Chapter 6 presents additional chemical looping applications that are potentially beneficial including those for H₂ storage and onboard H₂ production, CO₂ capture in combustion flue gas, power generation using fuel cell, steam methane reforming, tar sand digestion and chemicals and liquid fuel production. A CD is appended to this book that contains the chemical looping simulation files and the simulation results based on the ASPEN Plus software for such reactors as gasifier, reducer, oxidizer and combustor and for such processes as conventional gasification processes, Syngas Chemical Looping Process, Calcium Looping Process and Carbonation Calcination Reaction CCR Process. Note: CD ROM, DVD and other supplementary materials are not included as part of eBook file.
