Question Paper Code : 51618

B.E./B.Tech. DEGREE EXAMINATION, MAY/JUNE 2014.

Third Semester

Mechanical Engineering

ME 2201/ME 32/PR 1204/080120005/10122 ME 302 — MANUFACTURING
TECHNOLOGY – I

(Common to Industrial Engineering, Industrial Engineering and Management and
Mechanical and Automation Engineering)

(Regulation 2008/2010)

Time : Three hours

Maximum : 100 marks

Answer ALL questions.

PART A — (10 × 2 = 20 marks)

1. Define casting.
2. What is pattern?
3. What is the difference between soldering and brazing?
4. Sketch the different types of oxyacetylene flames.
5. Define "upsetting" and "drawing down" in forging operation.
6. Sketch the different types of rolling mills.
7. What is the difference between a cutoff operation and a parting operation?
8. What is meant springback effect in sheet metal bending?
9. What is polythene?
10. Name the common thermosetting plastics.

PART B — (5 × 16 = 80 marks)

11. (a) (i) Explain the hot chamber die casting with figure. (8)
(ii) Enumerate some common casting defects and explain the reasons
which cause these defects. (8)
Or
(b) Describe the stepwise procedure of making a mould with a two piece split
pattern. (16)

Machanical Technology June 2014 Question Paper Grade 11

Yicheng Fang

Machanical Technology June 2014 Question Paper Grade 11:

Over 40 Publications / Studies Combined: UAS / UAV / Drone Swarm Technology Research , Sustainable Energy Development and Innovation Ali Sayigh,2022-02-24 This book contains selected papers presented during the World Renewable Energy Congress WREC 2020 at the Instituto Superior Tecnico in Lisbon The WREC is dedicated to promoting renewable energy global development and features top international experts policy makers scientists engineers technology developers and business practitioners addressing the most current research and technological breakthroughs in sustainable energy development and innovation The contributions address policy and renewable energy technologies and applications in all sectors for heating and cooling agricultural applications water desalination industrial applications and for the transport sectors Presents cutting edge research in green building and renewable energy from all over the world Covers the most up to date research developments government policies business models best practices and innovations Contains case studies and examples to enhance practical application of the technologies

Trends in Oil and Gas Corrosion Research and Technologies A. M. El-Sherik,2017-06-09 Trends in Oil and Gas Corrosion Research and Technologies Production and Transmission delivers the most up to date and highly multidisciplinary reference available to identify emerging developments fundamental mechanisms and the technologies necessary in one unified source Starting with a brief explanation on corrosion management that also addresses today s most challenging issues for oil and gas production and transmission operations the book dives into the latest advances in microbiology influenced corrosion and other corrosion threats such as stress corrosion cracking and hydrogen damage just to name a few In addition it covers testing and monitoring techniques such as molecular microbiology and online monitoring for surface and subsurface facilities mitigation tools including coatings nano packaged biocides modeling and prediction cathodic protection and new steels and non metallics Rounding out with an extensive glossary and list of abbreviations the book equips upstream and midstream corrosion professionals in the oil and gas industry with the most advanced collection of topics and solutions to responsibly help solve today s oil and gas corrosion challenges Covers the latest in corrosion mitigation techniques such as corrosion inhibitors biocides non metallics coatings and modeling and prediction Solves knowledge gaps with the most current technology and discoveries on specific corrosion mechanisms highlighting where future research and industry efforts should be concentrated Achieves practical and balanced understanding with a full spectrum of subjects presented from multiple academic and world renowned contributors in the industry

Handbook of Automated Scoring Duanli Yan,André A. Rupp,Peter W. Foltz,2020-02-26 Automated scoring engines require a careful balancing of the contributions of technology NLP psychometrics artificial intelligence and the learning sciences The present handbook is evidence that the theories methodologies and underlying technology that surround automated scoring have reached maturity and that there is a growing acceptance of these technologies among experts and the public From the Foreword by Alina von Davier ACTNext

Senior Vice President Handbook of Automated Scoring Theory into Practice provides a scientifically grounded overview of the key research efforts required to move automated scoring systems into operational practice. It examines the field of automated scoring from the viewpoint of related scientific fields serving as its foundation, the latest developments of computational methodologies utilized in automated scoring, and several large scale real world applications of automated scoring for complex learning and assessment systems. The book is organized into three parts that cover 1 theoretical foundations, 2 operational methodologies, and 3 practical illustrations, each with a commentary. In addition, the handbook includes an introduction and synthesis chapter, as well as a cross chapter glossary. **The 10-Second Commute** Terri R. Kurtzberg, Mason Ameri, 2022-10-18 Virtual work, which was steadily on the rise even before the pandemic, is explored in this timely book that describes the impact of technology on our work experiences, ranging from the individual psychological level to the broad societal implications. Widespread remote work is now possible, but it comes with its share of frustrations. Virtual work has changed our lives in ways big and small, from trying to balance our time to what we wear and where we sit, and from how we communicate to where we should look during a videoconference. It's also fundamentally changed what kinds of jobs we can now do. Grounded in research and including lively personal anecdotes, *The 10 Second Commute* provides a thoughtful and comprehensive scan of the nature of virtual work. The authors, both researchers in management and technology, explore the current questions of our virtual lives, such as: Why Zoom instead of Skype? Why are emojis so useful? Why is videoconferencing so exhausting? How does diversity at work both help and hinder productivity? Virtual work is more than just work; it permeates our whole lives, and it will continue to do so as hybrid work arrangements become the new normal. Helping readers better understand the virtual work experience, this book will engage and inform everyone who is still trying to make it work. **A Human Algorithm** Flynn Coleman, 2019-10-01 A groundbreaking narrative on the urgency of ethically designed AI and a guidebook to reimagining life in the era of intelligent technology. The Age of Intelligent Machines is upon us, and we are at a reflection point. The proliferation of fast-moving technologies, including forms of artificial intelligence akin to a new species, will cause us to confront profound questions about ourselves. The era of human intellectual superiority is ending, and we need to plan for this monumental shift. *A Human Algorithm: How Artificial Intelligence Is Redefining Who We Are* examines the immense impact intelligent technology will have on humanity. These machines, while challenging our personal beliefs and our socioeconomic world order, also have the potential to transform our health and well-being, alleviate poverty and suffering, and reveal the mysteries of intelligence and consciousness. International human rights attorney Flynn Coleman deftly argues that it is critical that we instill values, ethics, and morals into our robots, algorithms, and other forms of AI. Equally important, we need to develop and implement laws, policies, and oversight mechanisms to protect us from tech's insidious threats. To realize AI's transcendent potential, Coleman advocates for inviting a diverse group of voices to participate in designing our intelligent machines and using our moral imagination to ensure that human rights, empathy, and

equity are core principles of emerging technologies Ultimately A Human Algorithm is a clarion call for building a more humane future and moving conscientiously into a new frontier of our own design Coleman argues that the algorithms of machine learning if they are instilled with human ethics and values could bring about a new era of enlightenment San Francisco Chronicle

Protein Solubility and Aggregation in Bacteria Salvador Ventura, 2016-09-26 Proteins suffer many conformational changes and interactions through their life from their synthesis at ribosomes to their controlled degradation Only folded and soluble proteins are functional Thus protein folding and solubility are controlled genetically transcriptionally and at the protein sequence level In addition a well conserved cellular machinery assists the folding of polypeptides to avoid misfolding and ensure the attainment of soluble and functional structures When these redundant protective strategies are overcome misfolded proteins are recruited into aggregates Recombinant protein production is an essential tool for the biotechnology industry and also supports expanding areas of basic and biomedical research including structural genomics and proteomics Although bacteria still represent a convenient production system many recombinant polypeptides produced in prokaryotic hosts undergo irregular or incomplete folding processes that usually result in their accumulation as insoluble aggregates narrowing thus the spectrum of protein based drugs that are available in the biotechnology market In fact the solubility of bacterially produced proteins is of major concern in production processes and many orthogonal strategies have been exploited to try to increase soluble protein yields Importantly contrary to the usual assumption that the bacterial aggregates formed during protein production are totally inactive the presence of a fraction of molecules in a native like structure in these assemblies endorse them with a certain degree of biological activity a property that is allowing the use of bacteria as factories to produce new functional materials and catalysts The protein embedded in intracellular bacterial deposits might display different conformations but they are usually enriched in beta sheet rich assemblies resembling the amyloid fibrils characteristic of several human neurodegenerative diseases This makes bacterial cells simple but biologically relevant model systems to address the mechanisms behind amyloid formation and the cellular impact of protein aggregates Interestingly bacteria also exploit the structural principles behind amyloid formation for functional purposes such as adhesion or cytotoxicity In the present research topic we collect papers addressing all the issues mentioned above from both the experimental and computational point of view
